HELEN, HENRI & LILIANA

Dierk Hagedorn, born in 1966, is a designer of user interfaces, corporate design, and printed works. He is an instructor for the longsword at Hammaborg, a club that concentrates on reconstructing the historical European martial arts. He has transcribed more than twenty German fencing-related manuscripts and has made them publicly available on the Hammaborg website. He has published extensive volumes about some of the most important German manuscripts, such as the *Peter von Danzig* fightbook, the *Lew the Jew* fightbook, and the famous illustrated codex by Hans Talhoffer. In partnership with Bartłomiej Walczak, he has edited another *Gladiatoria* manuscript: a facsimile of the Cracow version. Other publications include numerous articles in magazines and essays for catalogues and anthologies. He is a member of the *Historical European Martial Arts Coalition* and has given many workshops and lectures about historical fencing with a particular focus on combat in armour in various countries.

Bartłomiej Walczak, born 1978, is a freelance film editor, visual effects artist, and colourist. Historical European Martial Arts have been his passion since 1999, and his work with the technical sources began in 2000. He founded and headed the Polish chapter of ARMA; co-founded the Polish HEMA Federation FEDER; he has taught and lectured worldwide and participated in tournaments, including winning the ILHG Open Longsword competition in 2015. He is also one of the founding members of the *HEMAC (Historical European Martial Arts Coalition)*. In 2002, he and Grzegorz Żabiński published *Codex Wallerstein: A Medieval Fighting Book from the Fifteenth Century*. Other publications include a preface to the facsimile edition of the *Gladiatoria* version from Cracow (with Dierk Hagedorn) and the Polish translation of *Peter von Danzig* (with Grzegorz Żabiński and Monika Maziarz). His areas of expertise include unarmoured and armoured longsword and dagger.

ACKNOWLEDGEMENTS

The book that you are about to enjoy is the result of our seemingly endless efforts to do justice to what we believe to be one of the very finest surviving medieval illustrated manuscripts.

Years ago—quite some time before we got to know each other—we independently stumbled over an astounding manuscript with truly stunning artwork: The *Gladiatoria* manuscript from Cracow, which is very similar to the one we present to you here. We were mesmerised by the combination of astonishing illustrations and profound explanations of the described techniques, all performed in full armour. Subsequently, a second *Gladiatoria* exemplar from Vienna came to our attention, as did other related manuscripts with *Gladiatoria* material that were also similar, yet with the difference that they contained little or no text. For quite some time we worked independently on the manuscripts of the *Gladiatoria* group, until finally, more than a decade ago, we met at an international fencing event, discovered our mutual love and admiration for the *Gladiatoria* group, and instantly decided to join forces. By that time, the *Gladiatoria* manuscript from a library in Gotha, Germany, which was believed to be lost during World War II, had resurfaced in the United States and was ready for a close examination.

With our combined efforts, we endeavoured to tackle the intricacies, the similarities and the differences of all of the *Gladiatoria* codices—a task that ultimately proved too demanding. Finally, we decided to concentrate solely on the New Haven manuscript, having chosen it as the most worthy for our edition.

It took us more than five years, during which this book has changed many times, sometimes drastically. In 2015, however, the synergy of our efforts and our mutual support throughout this long process allowed us to finally present the fruits of our labour in a bilingual German–English edition: the reproduction of the earliest representative of the *Gladiatoria* line. While neither as mature as the Cracow version, nor as complete as the Vienna one, it contains the widest variety of early 15th century arms and armour, depicted in

amazing detail. At the same time, the codex has an intriguing history of its own. We hope to have done it justice—both visually and academically.

But the story doesn't end there. Two years later, we were approached by Michael Leventhal of Greenhill Books: could we imagine a revised edition that would keep the English text—and the beautiful artwork, of course—but drop the German text? Of course, we agreed. The splendour of *Gladiatoria* should be spread, and the knowledge about it should grow and prosper.

We would not have been able to succeed without the invaluable help of friends and colleagues worldwide. Therefore, particular thanks go to Martin Austwick, Jörg Bellinghausen, Michael Chidester, Tomasz Ciaciek, Keith Farrell, Matthias Goll, Cornelia Hopf, Daniel Jaquet, Jens Peter Kleinau, Krzysztof Kruczyński, Francis Lapka, Gregory Mele, Ireneusz Nowak, David Rawlings, Radosław Ropka, Julia Thut, Manuel Valle Ortiz, Roland Warzecha, Martin Wierschin, Thore Wilkens, Hagen Wooge, and Grzegorz Żabiński.

We want to emphasise the tremendous assistance of Christian H. Tobler, who generously helped with proof-reading the English versions of all texts for the first edition.

We also need to point out the remarkable amendments and pieces of advice we owe to Elani K. Wales, who checked every sentence in concert with the German text and suggested numerous enhancements.

Another huge thank you goes to our publishers, Torsten Verhülndonk of the original edition, without whom the whole affair would have ended as an unfulfillable dream, and Michael Leventhal, who insisted on a revised version.

And finally, very special thanks go to our beloved and patient wives, Verena and Urszula.

We are happy and grateful that our field of expertise and our ongoing efforts towards making the old manuscripts shine seem to gather an audience. We owe you much, dear reader.

FOREWORD

FOREWORD

Early in the 16th century the once-forgotten but now famous Spanish master of arms Pietro Monte declared that skills such as wrestling and the effective handling of weapons in personal combat could not be acquired solely through words. Practical demonstration by an expert was an absolute necessity. And, apart from a few eccentric exceptions, other masters of arms similarly felt that, without the help of a teacher, their skills could not be adequately acquired by students—however keen and able the latter might be. Yet many of these martial pedagogues were moved to set forth their fighting arts in treatises comprehensive in scope and frequently illustrated by artwork of considerable sophistication and exactitude; and the *Gladiatoria* manuscript—impeccably edited in this present volume—is an especially noteworthy example of the genre.

Neither Monte nor any other master established a school or tradition enduring enough to provide for modern students the practical demonstrations once thought indispensable, and nowadays the enthusiast is obliged to deduce whatever is possible from the manuscripts and early printed books which survive in libraries and other repositories and which are still available for study. For several years now the importance of these fightbooks prepared by masters of arms throughout the late Middle Ages and Renaissance has been recognized by scholars anxious to reconstruct the martial arts of Western Europe—although, unfortunately, outside that circle of enthusiasts, the value of these texts has not been widely recognised. That is why I am delighted to have been invited to contribute a foreword to this edition which offers precisely the approach and information that is badly needed not only to enlighten students of historic martial arts but also to attract the attention of other scholars who have thus far resolutely ignored the sort of material which is so elegantly laid out before us by the editors of this volume.

In the first place, their analysis of the manuscript's structure makes clear, and resolves, the considerable difficulties to be encountered in

any attempt at establishing the original state of such an elaborate codex and its relationship to other texts. But this edition is exemplary in other ways too. While it is true that there has recently been a spate of published versions of fight manuscripts and early fencing texts, many of these have been designed for a limited readership which is not particularly concerned with scholarship or with intellectual considerations beyond the actual reconstruction of fighting techniques. Thus there have been several translations displaying varying degrees of accuracy; with silent emendations; with sketchy and elementary introductions stating little beyond the obvious; and even with adulterated illustrations. An edition such as the present volume is much rarer—although fortunately becoming less so.¹ It not only provides a high-quality facsimile reproduction of the original pictures and text; but it also offers a transcript of that text; an annotated translation into modern German and English; and an analytical study of the codex itself, clarifying matters of provenance, structure, binding and trimming, and similar essential technical information. All of this enables readers to grasp the way in which the original work evolved and, of course, to use their own intelligence and experience to tease out the most likely practical interpretation of obscure or ambiguous passages.

However, a publication such as this raises other important issues which should not be overlooked. It is evident that the written exposition of the combatants' movements and postures are here as exact as mere words can make them; and the illustrations which accompany each verbal description are meticulous and expertly drawn. Indeed the artwork clarifies not only the sequence of movements in a general way but also pays close attention to every gesture; to leg and foot placement; to the movement and position of hands and even of the fingers; and, of course, to the constantly changing relationships between spears, swords, and daggers. Moreover, each section of this text—as in most other combat manuals—constantly refers the reader to the relevant illustration for clarification. 'As you see painted above' is the refrain on all but three folios. The marriage of word and image is paramount: but I wonder (not for the first time) whether any notice will be taken of this and similar books either by art historians or by historians of pedagogy. Cohorts of the former would certainly cluster around a manuscript of similar date and quality were it devoted to the lives of saints rather than to the activities of knights engaged in personal combat. Similarly scholars, who have often noted the stress placed by Renaissance educationalists on the need for physical and military training, never

seem to have noticed that what we have in works such as *Gladiatoria* is an advanced, sophisticated pedagogical system of movement notation expounding those very skills which were deemed crucial throughout the Renaissance and beyond. It is to be hoped that art historians and students of so-called ‘Humanism’ will recognize the inherent value of such records and not shrink from the violence of personal combat especially when it is as intelligently and beautifully presented as in the manuscript here under consideration. Certainly students of Western martial arts—many of whom *are* aesthetically aware and historically informed—will give it the attention it deserves.

¹ Among the more valuable editions I would note FORGENG: *The Medieval Art of Swordsmanship*; RUBBOLI/CESARI: *Flos Duellatorum*; ŻABIŃSKI/WALCZAK: *Codex Wallerstein*; and PORZIO/MELE: *Arte Gladiatoria Dimicandi*.

OFFENCE & DEFENCE

OFFENCE AND DEFENCE

Arms and Armour from the New Haven *Gladiatoria* Manuscript

We all know what a knight looks like: a shiny suit of armour covers his body, and in his hand he holds a mighty sword, exactly like a Playmobil figure or another toy knight, exactly as we may have seen in the movies. The fighters in the *Gladiatoria* manuscript from New Haven wear magnificent armour too, and they are equipped with all kinds of weapons. In this brief outline I want to concentrate primarily on the peculiarities and the characteristics of arms and armour of this particular manuscript; a thorough and detailed examination remains to be done—essentially due to mere reasons of space.

I. ARMOUR

The Harness

Armour, or, to use the more historically accurate term, the harness¹ (plate 1) that dresses an entire man² in iron plates, appeared only at the very end of the age of chivalry. When the development of the complete suit of plate armour was completed, the decline of knighthood had already begun and other power factors, such as trade and commerce in the cities, were becoming increasingly important. Nevertheless, harnesses continued to be used for centuries before ultimately being phased out. Very occasionally, however, harness wearers appear even today—such as the Swiss Guards of the Pope, who are still equipped with a breastplate.

The development from body protection made of mail to a complete plate harness³ took place mainly in what is now northern Italy, largely in the second half of the 14th century.⁴ After that time, no substantial

new features were added; however, wearing comfort was improved and the protective effect increased by more refined and sophisticated technical details.⁵ The shoulder constituted a particular challenge in this respect.⁶ Further changes were often only fashionable whims,⁷ such as exuberant fluting, etching, gilding and other accumulations of decoration in what was referred to as parade armor. Around 1420, the development of the Italian harness was largely completed. At the time, the “soft style” predominated in Germany; this term describes the appearance of armour that consists of a combination of individual iron plates, fabric, and parts made of mail.⁸

Unfortunately, very few specimens have survived from the period spanning the early days of the armourer’s art to about the middle of the 15th century,⁹ and an exact number is next to impossible to ascertain.¹⁰ Early harnesses made in Italy appear relatively frequently. This is due to the division of labour in the production process, which allowed for enormous output. The German armourers, who were organized in strictly regulated guilds, could not accomplish this to that extent. Notable examples can be found in the armoury of Churburg castle in Schluderns (South Tirol)¹¹ which possesses the oldest surviving breastplate from about 1370 (inv. no. CHS 13). This breastplate came from the workshop of the famous armourer family Missaglia ([plate 2](#)). At this time harnesses made in Italy were far superior to examples from Germany.¹²

By around the middle of the 15th century, the competing armouring centres in Italy and Germany had developed their particular own style. Italian harnesses are smooth and rounded. By contrast, the German harnesses are far more angular and edgy. The surface of the individual armour parts were increasingly decorated with ridges and flutings.¹³ Around the year 1470, this eventually led to the so-called “Gothic” armour style, a term, however, that stems from the Victorian age. With its intricacy and graceful exterior appearance, it “represents the apogée of the armourer’s art”.¹⁴

The Italian harness also differs from German examples in some construction-related peculiarities: it has lateral fastenings consisting of hinges (left) and buckles (right), and articulated breast and backplates connected by leather straps. The shoulder defences, called pauldrons, are expansive and asymmetrical, and the most popular helmet is the visored armet.

German armour parts from the mid-15th century are much rarer than Italian ones, and not even a single complete suit has survived. The best preserved one is a composite of two harnesses from about

1450 in the Wien Museum in Vienna (inv. no. 127.000–127.009), but the pauldrons, rerebraces, couters, gauntlets and helmet are missing (plate 3).¹⁵ It ranks among the so-called “Kastenbrust” harnesses that feature a more or less box-shaped breastplate and which were popular in the Holy Roman Empire and in Flanders. The origin of the term Kastenbrust (or “box-shaped breast”) remains unknown, but it alludes to the geometrical ideal (a straight, flat chest, that bends inwards almost in a right angle just below the breastbone), although deviations seem to be the rule rather than the exception.

The expression Kastenbrust is thus somewhat misleading because the surviving specimens are not particularly box-shaped, but have rather bulbous or bulged forms, sometimes even with a pronounced middle ridge. Thus, the only four surviving examples correspond only partially to the definition as it is provided, for instance, in the *Bildwörterbuch der Kleidung und Rüstung*: the Kastenbrust is a prismatic shaped breastplate with transverse and lateral edges as a part of the late Gothic harness from the mid-15th century, also comprising a tonlet.¹⁶ Another characteristic of the Kastenbrust is the one-piece construction of the breastplate, which, unlike the later articulated examples, overlaps a waist plate from above at roughly navel height. In contrast, the articulated lames of later harnesses are constructed such that each lower plate overlaps the upper one. The surviving examples suggest that the tonlet that is attached to the lower edge can be taken off by means of pins and clips if required.

Another Kastenbrust from the Metropolitan Museum in New York (inv. no. 29.150.79) is also not particularly box-shaped. The surface is broken up by numerous small ridges that extend radially from the bottom edge of the breastplate up to the armholes. Another specimen, in the Glasgow Museums (inv. no. A1981.40.a–c), is dated to 1430–50 and is considered to be the earliest surviving piece.¹⁷ While it is clearly much more box-shaped, it nevertheless shows strongly rounded shapes at the sides of the abdomen.

A few years ago, Matthias Goll succeeded in identifying another Kastenbrust at the Deutsches Historisches Museum in Berlin (inv. no. W2312).¹⁸ Due to the diversity of those harnesses summarized under the term Kastenbrust, Goll, Müller and Graf suggest a variety of more refining terms: “straight Kastenbrust” for the classic square type, “articulated Kastenbrust” for variants with multiple lames instead of a single waist plate, and “Kastenbrust with a middle ridge”.

Sources from the visual arts are far more numerous than actual

surviving examples: paintings by artists such as Rogier van der Weyden ([plate 4](#)), Jan van Eyck, Hans Multscher, Master Francke, and Konrad Witz show early harnesses in loving detail, even and especially those with a Kastenbrust. Some sculptures depict elaborate Kastenbrust armour in detail, such as the statue of St. George from the main altar of St. George Church in Wismar ([plate 5](#)).

The manuscripts of the *Gladiatoria* group¹⁹ stem from the transitional period around the middle of the 15th century, when the soft style merged into the Gothic style.²⁰ Precise dating of the manuscripts is difficult, but if one takes the stylistic criteria of armour into consideration—the remarkable similarity with the painting “Virgin and Child with Canon van der Paele” by Jan van Eyck from 1436 is particularly striking— dating to exactly this period is rather likely. The three *Gladiatoria* manuscripts containing both images and text (Cracow, New Haven, and Vienna), are generally quite similar to each other—although the Cracow codex does stand out, both in terms of the illustrations as well as the stern *textualis* handwriting, making its appearance more sophisticated but also more stylised. The two specimens from Vienna and New Haven are much more similar to each other, and it even seems that the scribe responsible for the New Haven codex wrote large parts of the Vienna version.²¹ The quality of the illustrations in the New Haven manuscript is consistently higher than in the one from Vienna, although there are nevertheless some outstanding exceptions (folios 7r/v, 11r/v, 17v–19r, 28r/v, 31v and 49r/v).

The variety of the harnesses in the two manuscripts from New Haven and Vienna is significantly larger than in the Cracow version, where the armour appears rather schematic and uniformly drawn. In particular, the New Haven codex offers the greatest wealth of armour details. The fighters in this manuscript still wear some textile armour parts or larger amounts of mail pieces—almost every harness wearer has a mail skirt. Even on harnesses of a much later origin, some parts of the body are still protected with mail made of small metal rings, such as where it is difficult or impossible for the plates to cover spots such as the armpits, the crooks of the arm, or the crotch. This flexible mesh was naturally more susceptible to strikes, but the sword’s tip would stop in the tiny gaps of the small rings. And thus Martin Huntfelt, for instance, expressly recommends in his instructions for the “Kampffechten”²² (harness fencing, literally: combat fencing), which are preserved in several fencing treatises, that combatants put the

sword into the opponent's rings (for example, Rome, Biblioteca dell'Accademia Nazionale dei Lincei e Corsiniana, 44 A 8, folio 89r).

The greatest opulence of variations is seen in the armour of the upper body. Here, the construction method cannot always be clearly seen in the illustrations, especially where a textile surcoat veils the breastplate. However, there are breast and backplates that seem to be riveted together from numerous vertical segments (for example, folios 10v, 11r, 15v, and 16r), some that are reminiscent of a brigandine (folios 16v, 23v, and 25r), and fully formed plate defences as well (folios 11r, 24v, 38r, 40v, 43r). Only a few examples depict a torso defence made of mail (folios 7r, 23r, 34v, 35r), and combinations (such as mail armour with a single breastplate, folio 36v) also appear sporadically. A curiosity is present in the left fighter on folio 28r, whose abdomen is protected beneath the breastplate with a mail skirt, which then, however, continues below the opponent's arm in front as a fault of articulated lames—probably due to inattention on the part of the illustrator. Incidentally, we shall meet this gentleman again elsewhere.

The majority of breastplates shown are curved and round, but there are quite a number of examples of armour which correspond to the *Kastenbrust* type—sometimes more pronounced, sometimes less—for example, here in the New Haven manuscript on folios 3v, 8v, 11r, 24v, and 25r; and in the Vienna manuscript on folios 4v, 18v, and 19r.

The leg defences are nearly uniform, with the exception of the sabatons, some of which are scaled, partially made of mail, or partially constructed of articulated lames. On several leg defences there is also a detail that is usually only found in Italian Quattrocento²³ harnesses: a perforated metal band, riveted to the lower lame of the poyeyn, to which a slim strip of mail is attached.

The arm defences are also very similar to each other. The shoulder represents a transitional form from the smaller *spaudlers* that just cover the shoulders, to the much wider *pauldrons*, equipped with sweeping front and rear wings.

Considering the period of origin of the codex, the low-worn plaque belts are also noteworthy, as they already look a bit old-fashioned, although they still seem to have been used to some degree (see [plate 5](#)). The sheaths for dagger and sword are attached to these.

Other aspects of particular interest are the buckles on the back of each of the right fencers on folios 1v and 24r, which may represent a helmet attachment; a unique lance rest on the left fighter on folio 28r—the gentleman with the two-part groin protection (in the entire

Gladiatoria group there is no second lance rest to be found); a heavy chain on folio 34r on the right armoured fencer, reaching from the right shoulder across the abdomen to the left calf;²⁴ not clearly identifiable fasteners on the right side of the harness of the left fighter on folio 38r; and finally a plaque belt, cluttered with small bells, at the left fencer on folio 5v.

The *Gladiatoria* harnesses represent armour for combat on foot for which symmetrical pauldrons are typical. The pauldrons of equestrian harnesses are often cut out on the right side in order to accommodate the insertion of the lance into the lance rest. On the left shoulder, which was more exposed to attacks, however, the pauldron frequently reaches down lower.²⁵ Another characteristic feature is the tonlet that is formed from the abdominal lames of the fauld, and the culet which occasionally can even reach down to the knee.²⁶ Although the lance rest mentioned on folio 28r indicates an equestrian harness, it is not impossible that the same armour could be worn for combat both on horseback and on foot. It is possible that even early harnesses were already specially assembled for the intended use, something that becomes rather common somewhat later, from the 16th century onwards, with the extensive armour sets, so-called garnitures, which may consist of more than 100 individual pieces. Another indication for the use on foot are cuisses that are closed at the rear (for example, folio 42v), which do not exist for fights on horseback, as this would make it difficult or even impossible to steer a horse due to the lack of contact of the thigh with the body of the horse.

Construction and Wearing Comfort²⁷

Several specialized craftsmen were involved in the production of a harness. In addition to the armourer, responsible for the forging of the steel plates and generally bringing the metal into shape, there was the polisher and others who attended to the leather strapping and the gloves. The edges of the individual armour parts were reinforced in numerous places by bending them over a wire; also, not all parts of a plate were the same thickness. Often those portions facing the opponent, such as the front of the breastplate, were thicker than the lateral parts. After forging, the harness was mounted on a trial basis in order to achieve the best possible fit. Finally, the individual parts were

joined with loosely connected sliding rivets²⁸ and leather straps, resulting in a flexible and yet stable body armour.²⁹ Stephen N. Fliegel writes: “The armor plates were ingeniously pivoted to each other at the sides by sliding rivets that moved in slots. The elements of a suit of armor were never riveted directly to each other (since this would render them inflexible), but were made to overlap slightly. Within the concealed areas were the rivets securing them to interior leather straps. The exterior rivets were either sliding rivets or nonfunctional ornamental rivets.”³⁰

There were indeed harnesses “off the shelf”, bought and sold by distributors and merchants. A better fit, however, was of course guaranteed by custom-made armour, which was facilitated by the customer’s personal garments being provided to the armourer.³¹ Bruno Thomas writes: “The harness is accurately made to measure—either from measurements of the customer himself or of his clothes, which are sent to the armorer—for one single wearer and his unique dimensions. Only he completely fills his form. Only with him can the armour fulfill its full purpose.”³²

The armourer transformed rigid metal parts into a flexible structure, almost a sculpture, that only showed its true beauty once its owner put it on and brought it to life. According to Bruno Thomas once again: “You can pick a single piece, such as a gauntlet, individually and study the rich, shaped play of movement in its many steel bands. The armourer pursues every single joint and its mode of action. Indeed, he manages to surpass it significantly in most cases. The body was to be given the opportunity to perform its gestures, and to find its shaped expression within its own movements—unhindered by a steel garment. Moreover, the harnesses made by the great masters strive to support this expression, and even to increase it. In truth, they are able to raise their wearers beyond themselves, to monumentalise them.”³³

The Weight of Armour

Mobility in armour and the weight of armour are constant sources of popular misconception. In a life or death battle, hardly anyone would take the chance of sacrificing the essential ability to move freely strictly in favour of protection. In fact, mobility in armour was

fundamental and was only slightly impaired. Recent studies at the University of Geneva have shown that some movement patterns allow even greater freedom with armour than without it.³⁴

Likewise, the weight of armour is usually estimated far too high. If we take the field pack of a modern soldier, which can weigh 30 kg or more, depending on the country and the mission, the burden rests primarily on the shoulders. However, the weight of the medieval harness was distributed over the entire body in a beneficial way. Indeed, this makes the use of the arms and legs slightly cumbersome, but overall, it offered considerable wearing comfort—especially for someone used to wearing armour from their youth.

Since, unfortunately, complete originals from the mid-15th century have not survived, we can only use whole harnesses from later periods for comparison. The armour for field and tournament from 1505–10 (W 81.12,30.94) from the Deutsches Historisches Museum in Berlin, for instance, weighs only 19.9 kg³⁵ and would still remain below 30 kg, even with the addition of clothing worn underneath, mail armour parts, sword and dagger. Another suit of armour from about 1520 from the same museum (W 2326, 38.226) weighs 22.4 kg³⁶ and a third from about 1540 (W 2325 a–h, 06.658 a–m) weighs only 18.9 kg³⁷—but this one is missing the left gauntlet. One heavyweight of the museum is the “Riefelharnisch”—as harnesses with an abundance of mostly vertical and parallel flutings are called—W 2327, AD 2997, which weighs in at 26.8 kg on the scales, but then again it is also 188 cm tall.³⁸ The closest chronological relative is a Gothic field harness from about 1470 (W 1052, AB 1397), which, however, is equipped with arm defenses that are not originally from this field harness, but rather from jousting armour, and the weight of which totals 22.7 kg.³⁹

The immobile knight, who, as soon as he has gone to ground, cannot rise again, and who would need to be lifted onto his horse by crane in any case, is an unfortunate legend that we owe to Laurence Olivier’s motion picture *Henry V*, which is otherwise quite worth watching.

In fact, while there was indeed heavy armour, it was generally only used for tournaments. In particular, helmets could reach an enormous weight of 15 kg—in contrast to the “normal” helmet, which weighed only 2–3 kg. However, the tournament was a highly specialised sport that required highly specialised equipment that could not be considered as a benchmark for field harnesses.⁴⁰

Safety

The harness provided its wearer with excellent all-around protection. However, absolute safety could not be ensured even here, because some parts of the body simply cannot be covered with steel plates. Examples include the leather gloves inside the gauntlets, which are necessary to grip the weapon securely, and the soles of shoes, because of the need for traction. In particular, the vision slits and vents in the visor were indispensable. These vulnerabilities, called openings, were naturally preferred targets for attack in combat. The fencing master Johannes Liechtenauer, for instance, lists the following openings: “Merck das ist wo der gewappent man am pesten zw gewinenn ist [durch](#) den harnasch | das ist vnder dem gesicht oder vnder den vñschen | Oder In den tanär der hendt oder auf dem arm~ hinden Inn den hantschuechen oder in den knykelen oder vnden an den fuessen den süllen | vnd In den gelencken der armpüg | vnd zwischen den painen | vnd an den steten da der harnasch sein gelenck hat | vnd die plössen soltu also suechen das dw zw einer ferreren nicht solt arbaitten noch stechen | wenn dw ein nahere vor dir gehalten magst”.⁴¹ (Note, this tells where the best places are to attack an armoured man through the harness. These are under the face, under the armpits, in the palms of the hands, on the arms from behind into the gauntlets, into the hollows of the knee, or below on the soles of the feet, in the insides of the elbows, between the legs, and anywhere the harness has its articulations. And you should seek the openings such that you do not work or thrust to a more distant opening when you can reach a closer one.)⁴²

Apart from that, the harness did protect the wearer very effectively against wounding, and a stroke or a thrust to the smooth and rounded plates was virtually ineffective and would not penetrate the steel. Nevertheless, there are several historical depictions of destroyed, pierced, battered, or smashed harnesses.⁴³ The question of how realistic penetrations such as these are is much discussed, especially since surviving specimens are rather rare.⁴⁴ To use modern replicas for verification may not necessarily provide a clear conclusion, because of different materials and manufacturing processes; sacrificing valuable originals is obviously not an option. So we look with great interest upon the punctured armours in the Wolfenbüttel *Gladiatoria* manuscript in which we can see breastplates being pierced with daggers on folios 82r , 94v ([plate 8](#)), 105v, 107v, and 110r; and on folio 109v, a helmet is completely pierced ([plate 9](#)). Other *Gladiatoria*

versions do not show destroyed armour parts.

The Helmet

Since all four extant Kastenbrust harnesses have survived only rudimentarily, we cannot say with certainty what type of helmet originally belonged to them. Paintings and sculptures suggest, however, that they were associated either with a kettle hat or with a bascinet, often in a particular variant called the great bascinet. In a famous painting by Konrad Witz that depicts a complete Kastenbrust harness, the suit of armour is equipped with just such a great bascinet that incidentally bears several nicks and scratches on the helmet's skull.

The helmets of the *Gladiatoria* manuscripts all belong to a single, uniform type, and they are remarkably similar to each other throughout. All have the form of a visored helmet, which has certain similarities to the great bascinet, but also shows elements of a close-fitting armet or a German close helmet. However, due to the illustrated head position, a great bascinet seems unlikely, since it would be attached to the breast and backplate (often by leather straps), which indeed allows rotation of the head inside the helmet to a small extent, but never in concert with the helmet. On the other hand, the straps on the back that appear in two illustrations have already been addressed, so a clear assertion is unfortunately impossible.

The visor is mainly depicted with two symmetrically arranged series of several narrow vertical vision slits; the circles that commonly appear above and beneath these slits can be interpreted either as decoration or as additional horizontal rows of air holes. The hinges of the visors are always covered with round discs.

Some helmets are shown with an aventail at the bottom, but this is not uniformly the case. While the manuscripts from New Haven and Vienna quite often show such aventails, they don't appear at all in the Cracow manuscript, with the exception of folio 30r. Other examples have either a throat and neck protection that apparently consists of articulated lames and that extends downwards to the breastplate (for example, folio 34r), or possibly a completely rigid protection.

The Gauntlets

It is noteworthy that some illustrated fencing manuscripts that deal with the armoured duel omit the presentation of steel gauntlets altogether. In the present manuscript, there are only two pictures in which the fighters wear gauntlets (folios 27r and 28v). These two pages normally follow each other directly and are only separated here due to the rebinding of the codex. It is only here that the gauntlet is explicitly mentioned as a target. It is not clear why no gauntlets are presented in the rest of the manuscript since the illustrator was quite capable of depicting hand positions, even with gauntlets. Illustrated gauntlets are also omitted in several manuscripts by Hans Talhoffer.⁴⁵ Other manuscripts, both earlier and later ones, such as those by Jörg Wilhalm,⁴⁶ Ludwig von Eyb,⁴⁷ Paulus Kal,⁴⁸ the *Codex Wallerstein*,⁴⁹ the Berlin codex *Libr. pict. A 83*, but also the earliest Talhoffer manuscript from 1448⁵⁰—to name just a few—indeed show armoured men with their gauntlets. The reason why the artists of the *Gladiatoria* manuscripts refrain from generally presenting gauntlets in the picture thus remains a mystery.

The cuffs of the few specimens, however, consistently have a plain hourglass form and, in contrast to those from the end of the 15th century, no articulation. Only the fingers are made of several small lames.

The Surcoats

A majority of the fighters wear long surcoats, which ornamentally frame the combat action in flowing shapes. Numerous dagged garments occur that embrace the harnesses tightly. It should be emphasized that the illustrated textiles snugly follow the shape of the breast and backplates, and that in some cases buttons (front: folios 4r, 5r, 6r, 9v, 11v, 12r, 13v, 18v, 23r, 26v, and 31r; lateral: folio 15v) or lacings (folios 10r, 11r) are even recognizable.

In the preceding 14th century, textile fabrics appear with body armour in a variety of ways. Some of them stand on their own, sometimes a single breastplate is worn over a quilted doublet, sometimes the fabric is used as a cover material over a metal body protection, such as with an early breastplate from the Bayerisches

Nationalmuseum (inventory number W 195), or even as a carrier material, as with the brigandine, where numerous overlapping steel plates are riveted to the fabric cover.

It is remarkable that pictures of fighters in armour of the same periode, as for instance with Hans Talhoffer,⁵¹ show the bare metal. On the other hand, the aforementioned fencing master Martin Huntfelt explicitly recommended to cut pieces from the surcoat of the opponent in order to stab them into his visor with a dagger (Rome, 44 A 8, folios 92v/93r).

Particularly noteworthy are also the fighters on the left on folios 29r, 34r and 40v, who wear doublets that resemble surviving originals from Lübeck and Stendal: knee-length, padded, quilted tunics with dagged edges, which are attached to the bottom.⁵²

The Ecranche

The medieval shield changed continuously over time, just like armour, and was adapted to different needs for the greatest possible protection with unimpeded mobility at the same time. Wood always served as the starting material, and a covering of leather or linen gave the shield further stability. Iron was present only in the form of shield bosses, occasionally as an additional reinforcement of the rim, or as fittings on the surface.⁵³ The large shields from the 11th century, which tapered towards an acute point at the bottom, and were thus able to protect the entire side of the warrior, became shorter and stockier over time, while the upper, formerly round edge became increasingly flattened: the closed form of the great helm rendered face protection by the shield unnecessary. Over the course of the further development of armour the equestrian shield became less and less important and evolved into a small triangle around the year 1300, called a heater shield. In the late Middle Ages a completely new form of equestrian shield appeared, the convex, outwardly curved, more or less rectangular *ecranche*—in the German sources known as “tartsche”,⁵⁴ a term which supposedly derives from the Arabic *dārake* (shield). This could also derive from the Latin *terga* (back), or *tergum tauricum* (oxhide).⁵⁵ The Italian *targa* and the English *targe* are related. The origin of the term *ecranche* is somewhat obscure; but the French word *écrancher* essentially means to take the creases out of a cloth. In the older version *écrancer*, the term *cran* referred to a notch.

Once plate armour was fully developed, the shield almost completely lost its relevance and was only used in isolated cases. The Ghent altarpiece by Jan van Eyck, dating to 1430, is an example of this. Its panels depict men in harnesses (of the *Kastenbrust* type) who carry several different forms of *ecranche*. In the tournament, however, the story is different—until the final decay of the sport, a shield was always in use, and was adapted to the respective discipline.

The time of origin of the *Gladiatoria* manuscripts marked the transition to a complete abandonment of the equestrian shield, which henceforth was used only in the tournament as a *manteau d'armes*, and for the two sportive forms of the joust, called *stechen* and *rennen*.

Ecranches, including those from the *Gladiatoria* group, have an indentation on the right side, the so-called *bouche*, which served as a means to keep the lance stable on horseback. Thus, these defensive weapons might suggest that the combat on foot was preceded by some fighting on horseback.⁵⁶ However, as already mentioned, with a single exception (folio 28r) not even a single fighter has a lance rest, which also allows the lance to be directed more accurately. It is possible that the *ecranches* were expressly intended for use on foot.

In the Wolfenbüttel *Gladiatoria* version, there are many more techniques than in the other manuscripts of the group; so, for instance, on folios 34r and 37r we see spears inserted into the *bouche*. Folio 34r (plate 10) is unique among the *Gladiatoria* manuscripts; the ninth technique in the version from New Haven on folio 3v, which corresponds to folio 37r from Wolfenbüttel, shows a different position of the *ecranche*.

In the New Haven manuscript, the *ecranches* are utilized only from the ninth to the twelfth techniques of the spear on folios 3v–5r. (The left-hand fighters in the Cracow and Vienna versions refrain from the use of the *ecranche* in the ninth technique, and in the manuscripts from Cracow and Wolfenbüttel—both of which also contain the first technique of the spear—the left fencer has taken his *ecranche* loosely in his left hand.) In all other images, the *ecranches* rest on the floor. None of them allow any heraldic identification of the fighters, but instead uniformly show a red St. George's Cross⁵⁷ on a white background. The only other illustrations of armoured fighters with *ecranches* appear in the so-called *Codex Wallerstein*⁵⁸ on folios 82v, 88v, 91r, 95v, 103r, 104v, 105r/v, and 107r/v. The armour represented in this manuscript, which is compiled from multiple sources, precedes those from the *Gladiatoria* group (plate 11).⁵⁹

II. ARMS

“It is a constant interaction and reciprocity between arms and body protection that led to new designs and shapes on both sides. As a result, the improvement of one group necessitated the perfection of the other.”⁶⁰

Javelin, Spear, and Lance

The spear and the lance were the most widely used weapons of the Middle Ages. Spears and javelins were already used in antiquity. They were about two metres long and thus well suited to be used in a duel in versatile ways. They could either be thrown or used in close combat with one or two hands. The longer lance, which was used on horseback and couched under the arm, appeared in Central Europe in the late 11th or early 12th century. About four meters in length, it was too heavy and too long to find extensive use on foot in the duel.⁶¹ Nevertheless, in the glosses on Johannes Liechtenauer’s verses, the dismounted fighter is still advised to make good use of his lance.⁶² The pike however, used in major military formations, could reach even greater lengths of up to six metres.

Occasionally, the precise linguistic definition of the German sources is difficult, so that “Speer” and “Spieß” are often used interchangeably—both of which would translate as “spear”. Generally, a “Speer” referred to an appropriate weapon for throwing—a javelin. Boenheim, however, offers a differing definition, calling the staff weapon used on horseback a “Speer”⁶³—which goes hand in hand with the *bouche* in the *ecranche* that serves to stabilize the spear or lance thrust, and which is called a “Speerruhe” (literally, spear rest) in the old sources. On the other hand, there is the so-called “Rennspieß”—a special tournament lance for the “Rennen” that was three to five metres long. The staff weapon in question, nevertheless, is referred to in the *Gladiatoria* manuscripts as “Spieß” throughout. It could either be thrown or used in close combat.

The length of the spears in the *Gladiatoria* manuscripts seems to be about two to two and a half metres, so they can be considered as too short for use on horseback. The spearheads are kept quite simple; they

are double-edged, and the long nozzle is attached to the shaft with a nail.

Numerous *Fechtbücher* describe fencing techniques in harness with the spear; none of the manuscripts that feature only text, however, mention the combined use with the ecranche. The chronologically related manuscripts by Hans Talhoffer⁶⁴ also show sword, dagger and spear together in the pictures, but no ecranches.

Illustrated *Fechtbücher* that additionally describe the mounted combat, like those by Paulus Kal,⁶⁵ show stylistically very similar spears or lances, whose most obvious difference is the length of the shaft. Interesting in this context are the two images in Kal's *Fechtbücher*, which separate the mounted combat from that on foot; here the dismounted combatant holds the long rider's lance in order to bring the horseman to the ground (plate 12). The next two illustrations show the dismounted harnessed fighters with shorter spears, followed by another two images with combatants on foot that again use equestrian lances.

In the writings that refer to master Johannes Liechtenauer, the fighting evolves from combat on horseback with lance and sword to dismounted fighting with spear, sword, dagger, and wrestling. It is worth noting in this context that in Paulus Kal's manuscripts, there is also only a single rendition of a harness that is equipped with a lance rest—however, without the depicted lance being inserted.⁶⁶

The Dagger

This short thrusting weapon was mainly suitable for close combat and appears in a plethora of forms. In the present *Gladiatoria* manuscript it occurs almost without exception as a rondel dagger, in which one disc forms the guard and another the pommel. Only in the very first illustration on folio 1r do we see an example of a so-called bollock, bullock, or kidney dagger, characterised by two spherical bulges at the base of the blade. Incidentally, this is the only occurrence of this weapon in the entirety of the manuscripts from the *Gadiatoria* group, although in the artistically less sophisticated Wolfenbüttel version, bollock daggers are possibly also shown on folios 32r, 50v, 68r/v, and 69r/v.

The handles often appear to be studded or ribbed, but the shape of the blades is difficult to identify. Historical dagger blades appear in

many different forms: round, one, two, or three-edged or even tetragonal cross sections exist; the blades can have a smooth or ridged surface or can be indented with a variety of fullers.⁶⁷

The dagger was often used as a last resort in armoured combat; once the opponent was taken to the ground or otherwise made unable to move, one should attempt to thrust into the openings of the armour with the dagger to completely persuade the opponent to surrender or even to kill him.⁶⁸

The Sword

The sword was ultimately *the* knightly weapon par excellence, although one can hardly speak of *the* sword. Like armour, the sword changed over the centuries. In the period that concerns us here, it was a versatile weapon that had already undergone a long development. The blades of the swords of the *Gladiatoria* manuscripts taper evenly from the crossguard to the point, the tip of the blade. The quillons are straight or curved only very slightly towards the point; the handle allows the sword to be gripped with both hands; and the generally scent-stopper-shaped pommel is often faceted, with a more or less pronounced sharp chamfered middle edge. Rarely seen is a button or tang nut (e. g. on folio 5v). According to Ewart Oakeshott's sword typology, the illustrated examples correspond to type XVII.⁶⁹ These swords, by definition, have a long handle as well as sturdy, long, and slender blades that taper straight to an acute point and provide a hexagonal cross section, sometimes with a shallow fuller.⁷⁰

The plain crossguards belong to Oakeshott type 1 (straight) or 7 (slightly curved towards the blade), the pommels are of type T, T4, or T5.

The handles are depicted rather plainly and do not have a distinct latitudinal ridge or thickening in the middle of the hilt, which appears in several extant specimens and is also commonly found in paintings and sculptures.

Even with this simplicity in terms of the design, the swords nevertheless do not lack the chape, the small leather piece that overlaps the crossguard in a semi-circle over the base of the blade and that is often referred to as a rain guard. However, the assumption that this little piece of leather is supposed to protect the sword against rainwater penetrating into the scabbard appears to be highly doubtful,

especially since a sword needs a tight fit in the scabbard to prevent it from falling out in any case, and furthermore the thickness of the crossguard alone should already provide sufficient protection against intruding rainwater. An alternative approach starts from the premise that the toughness of the leather might briefly slow down the opponent's blade as it came sliding along one's own weapon, in order to better protect one's own hand, but might also gain a temporal advantage for counter actions. Another explanation assumes that the copious sweat from the hands, which causes steel to corrode, could be kept away from the crossguard and the base of the blade in this way. Since sweat also penetrates leather gloves after a time, such a protective leather piece would be useful both in unarmoured combat as well as in harness. Since the left hand usually precedes the right one in armoured fencing, and thus the opponent's blade hardly can come into contact with one's own crossguard anyway, this explanation seems the most plausible.

Exactly as with armour, the weight of swords is often overestimated. Performances in front of an audience in which faithful replicas are passed around bring forth some estimated weights of five, ten or even fifteen kilogrammes. A second item, presented afterwards for reasons of comparison, a 1.5 litre water bottle, generally evokes some astonishment. On average, one-handed swords weigh 800 grammes to 1.3 kg, two-handed ones 1.4 to 2 kilogrammes, and the large so-called "Bidenhänder" (literally: both-handers) from the Renaissance weigh about 3 kilogrammes.⁷¹ In the appendix to his essay "Anderthalbhänder – Zweihänder – Langes Schwert"⁷² Tilman Wanke mentions the weight of several swords belonging to the same period and of the same type as those from the *Gladiatoria* group. For example cat. no. 5 (hand-and-a-half sword, bastard sword: Collection Fricker, No. 741), weighs 1,250 g at 115 cm; cat. no. 6 (bastard sword, armour-piercing sword: Kunsthistorisches Museum, Vienna, A 168) weighs 1,668 g at 130.2 cm; cat. no. 7 (hand-and-a-half sword: Tower of London, IX 959) weighs 1,250 g at a length of 109.7 cm; cat. no. 15 (two-handed sword: Deutsches Historisches Museum, W 893) weighs 2,190 g at 135.5 cm; cat. no. 16 (bastard sword: Tower of London, IX 16) weighs 1,530 g at 119.4 cm; and finally cat. no. 18 (two-handed sword: Collection Fricker) weighs 1,880 g at a length of 150.9 cm.

One of the most striking techniques is certainly the unscrewing and throwing of the pommel (f. 5r). Beyond the other *Gladiatoria* manuscripts that present the same technique (Cracow: 7r, Vienna: 6r,

Wolfenbüttel: 35r), this particular technique appears only in three manuscripts, namely one by Gregor Erhart⁷³ (folios 217v/218r),⁷⁴ one attributed to Jörg Wilhalm⁷⁵ (fol. 84r)⁷⁶ and one by Joachim Meyer⁷⁷ (folios 93r/v),⁷⁸ although Meyer's version is a little shorter than the other two. Another example, which contains no accompanying text, but rather only an image, can be found on f. 25r of *Cod. 10799* from the Österreichische Nationalbibliothek in Vienna.

This technique is remarkable insofar as the sword was normally constructed in such a way that the tang passed through both the handle and the pommel and was riveted at the end of the pommel, such that it could not easily be taken apart. The modern sporting weapons of foil, epee, and sabre, however, do have removable pommels or handles in order to facilitate quick replacement of a damaged blade. Nevertheless, a screwable pommel on a sword is a curiosity and has not survived on any actual weapon according to current knowledge. A closer look at the Talhoffer codex from Copenhagen,⁷⁹ however, reveals an illustration of swords for the armoured duel (folio 108r, [plate 13](#)): “die zway swert hörnt zu dem kampf gwauppet.” (“These two swords belong to the fight in armour.”) One of them possesses a thread, onto the upper end of which a spiky pommel is screwed. This does indeed raise the question of whether there were special swords with removable pommels, particularly designed for the medieval ordeal. In addition to pointed pommels and quillons, Talhoffer also shows spherical bulges in the middle of the blade ([plate 14](#)) which might serve to protect the hand, or allow for a firmer grip.

However, the swords depicted in the *Gladiatoria* manuscripts are not exactly like the special swords shown in Hans Talhoffer's aforementioned Copenhagen codex. Furthermore, they don't possess a distinctive ricasso in the middle of the blade as can be seen in a surviving specimen in the Hofjagd- und Rüstkammer in Vienna (cat. no. 6 in Wanke: “Anderthalbhänder – Zweihänder – Langes Schwert”).⁸⁰ The blade of this remarkable sword has a significant indentation with a distinct rectangular cross section in its middle part, which makes it extremely likely that the sword was supposed to be held specifically in the manner for half-swording technique.

In any case, the sword is a multifaceted weapon for a variety of purposes: It can perform strikes and cuts with the edge, the point can be used for thrusting, the crossguard facilitates joint locks and throws,

and the pommel can be used as a club for powerful blows. Thus the versatile sword, not to mention all the myths associated with it, is a symbol of chivalry, if not entirely of the Middle Ages and medieval combat.

1 The term “harness”, from Old French “harnois”, generally refers to the body protection, which develops from mail into plate armour. Another specific term is the cuirass, which consists only of breast- and backplate.

2 Evidence of women in armour is extremely rare. The painter called “Meister des Albrechtsaltars zu Klosterneuburg” for example depicts the Virgin Mary in harness. However, this is obviously intended as an allegory. A well-known portrait of a prominent harness wearer, Joan of Arc, was created by an unknown artist, although not in her lifetime (Paris, Centre Historique des Archives Nationales).

3 The rigidity of overlapping steel plates gives greater protection than the by-then penetrable surface of mail, particularly against strikes. Individual parts made of metal plates, such as poleyns and greaves, already existed in the 13th century (FLIEGEL: *Arms & Armor*, p. 44).

4 The smiths who produced armour, the armourers, established themselves in all major cities. By the demands placed on them in a technical and artistic point of view, they distinguished themselves from the mass of metal-working craftsmen and artisans (*Die Innsbrucker Plattnerkunst*, p. 17).

15 “On closer inspection, the unfortunately incomplete equestrian armour turns out to consist of the remnants of two contemporaneous harnesses. One of them, the slightly larger one, was manufactured with a plain surface, only enlivened by jagged edges on the movable bands—the so-called “lames”, the other one was decorated by radiating ridges and flutings, and by notched edges on the lames. The bulging chest with three vertical ridges and a culet that reached down to the groin, initially belonged to the plain armour. Today it lacks the riveted strips on the rims of the arm defences and the cotteder lancerest on the right side of the breastplate. In addition, the greaves, including the sabatons, belong to this armour; and finally the vambraces, being the remainders of a formerly movably assembled arm defence, were added to this composite late Gothic suit of armour. The other harness provided the backplate including a short culet, decorated with embossed ridges—again missing the riveted strips—as well as the upper leg defences (cuisses), and finally the greaves including sabatons from the late Gothic armour.” (*Das Wiener Bürgerliche Zeughaus*, p. 39.)

19 Named for the Cracow manuscript *Ms. Berol. germ. quart. 16* which carries the term “Gladiatoria” (= sword fighting) on the title page in capital letters.

20 Hans-Peter Hils dated the New Haven codex (then still believed to be lost in the war) loosely to the 15th century in general, the manuscript from Cracow to the first half of the 15th century, and the one from Vienna to about the year 1430. The Wolfenbüttel codex is also dated to the 15th century, and the former Donaueschingen manuscript, which is currently located in Paris, is labelled as a compilation written around the year 1500 (HILS: *Meister Johann Liechtenauers Kunst des langen Schwertes*).

21 Two writers were involved in the creation of the Vienna manuscript *KK 5013* (FRÜHMORGEN-VOSS/OTT/BODEMANN/STÖLLINGER-LÖSER/LENG: *Katalog der deutschsprachigen illustrierten Handschriften des Mittelalters*. Band 4/2, Lieferung 1/2, p. 30).

22 In the fencing treatises, the usual expression for the duel in armour.

23 The time of the early Renaissance in Italy, the 15th century.

- 24 The meaning of this chain is not apparent. Earlier armour has chains attached not only to the breastplate, but also to both sword and dagger in order to prevent them from getting lost during fighting. One particular chain can be admired that is located on or around the neck of a field harness from the Dresden Armoury. This is, however, “a souvenir of the encirclement of Duke Heinrich by the Frisians in Franeker in the year 1500, which was originally kept separately and does not belong to the harness, which can only have been manufactured in the second decade of the 16th century at the earliest.” (*Harnische. Historisches Museum Dresden*, p. 51.)

- 43 In one of Talhoffer's manuscripts, for example, we can see breastplates being pierced with a pollaxe: Copenhagen, Det Kongelige Bibliotek, *Thott 290 2o*, folios 132r and 134v (plate 6); and in the famous *Codex Manesse* (Heidelberg, Universitätsbibliothek, *Cod. Pal. germ. 848*, folio 321v) Dietmar der Setzer smashes the great helm of his opponent with a sword

(plate 7).

44 The collection at Schloss Ambras in Innsbruck possesses a set of tournament armour, the helmet skull of which shows two pierced square holes on the left side.

45 The archetypal *Königsegg codex* (Königseggwald, Gräfliches Schloss, Hs. XIX, 17–3), for example, also dispenses with the presentation of gauntlets. With the exception of p. 7, where the hands have a natural colouring, they are provided with the same gray-blue washes as the armour. Special cases are the armed men praying on pages 3 and 45, which also have flesh-coloured hands without any gauntlets depicted in the image. On pages 18 and 43, however, we actually see gauntlets. In the former, Master Talhoffer helps squire Luithold of Königsegg to don his harness, with the squire holding a gauntlet at the cuff in his left hand, while his helmet is still on the ground. On page 48 the killed adversary is stripped of his armour, including gauntlets. Another representation of gauntlets is similar to that in the *Gladiatoria* group: The image for the text “das füren by dem hentschoch” shows a fighter leading his opponent out of the fight ring with the sword tip in the cuff. It is noteworthy that the armed men in the horse fighting section (pp. 99–119) also do not wear gauntlets and have naturally coloured hands.

56 In the manuscripts in the tradition of Johannes Liechtenauer, the combat action evolves from the mounted combat with lance and sword towards the dismounted duel with spear, sword and dagger, which can be ended by wrestling or the fight on the ground.

57 St. George was one of the most popular saints of the Middle Ages and a common patron saint particularly for matters of nobility and chivalry. In the fencing books, the St. George's Cross appears not only as here, in armoured combat, but also as a sign on the big shields for the judicial duel according to Franconian and Swabian law, as we see it with Hans Talhoffer and Paulus Kal. There it appears on both the shields themselves and on the clothing of the fighters (Munich, Bayerische Staatsbibliothek, *Cod. icon 394a*, f. 53v–86r). The duellists in the older part of the Augsburg manuscript *Cod.I.6.4o2* (*Codex Wallerstein*) also wear surcoats with crosses; however, the colour variations are larger: crosses in red on green, white on red and red on white appear just as frequently as completely monochrome garments.

58 Augsburg, Universitätsbibliothek, *Cod. I.6.4°2*.

59 In the *Katalog der deutschsprachigen illustrierten Handschriften des Mittelalters*, this part of the manuscript is dated to ca. 1420–30 (p. 110)—although this assumption seems to be rather late.

74 Zewerfen mit dem knopf / Bistu ein starcker man vnd hetest gern end vnd wilt riterliche[n] komen vo[n] aler deiner wer allain vo[n] dem degen so mach dir eine[n] grosen knopf an dein schwert der darab lauft vnd nim dein schwert in die lincken hand

beÿ dem gehultz vnd leg es auf den arm vnd dein spies in die rechten hand zu dem schuß vnd den schilt las valen oder nim den spies zu dem schwert als du den zutritzt so nim den knopf vo[n] dem schwert vnd wirf in vnd wen er das weren wil so scheus im zu mit dem spies oder mit dem schwert zwischen zwaien fingern oder halt das schwert welches du wilt das dir nutz seÿ / bist du der krencker so las in ferwerfen vnd verschiesen das versetz im mit dem schilt vnd arwait mit deiner wer das er nit zu dir kom als ich dich vor gelernet hab. (To throw with the pommel. If you are a strong man, and you want to put an end to it and get rid of your weapons—except the dagger—in a chivalrous way, so have a large pommel made on your sword, which can be removed from it. Take your sword in the left hand by the hilt and put it on your arm. Take your spear in the right hand for the throw and drop your shield, or take the spear together with the sword. If you then step forward, take the pommel off the sword, and cast it. If he wants to ward this off, so throw either the spear or the sword towards him, between two fingers, or keep the sword, just as you like and it may be useful to you. If you are the weaker one, so let him cast or throw. Displace this with the shield and attack with your weapons so that he cannot come to you, as I have taught you before.)

75 Munich, Bayerische Staatsbibliothek, *Cgm* 3712.

76 Zewerffen mit dem knopff

Bistu ein starcker man vnd hetest gernn endt vnd wilt riderlichen komen von aler deiner wer allain von dem degen so mach dir einen grosen knopff an dein schwert der darab laufft vnd nim dein schwert in die linckhen handt beÿ dem gehiltz vnd legs auff dein arm vnd dein spieß in die rechten handt zu dem schus vnd den spies [!] laß falen den spies zu dem schwert als du dem zu drist so nim dein knopff von dem schwert vnd wirff in vnd wen er das weren wil so scheus im zu mit dem spies oder mit dem schwert zwichsen zweÿen fingern oder halt das schwert welchs du wilt das dir nutz seÿ bistu der krenckher so laß in verwerffen vnd verschiesen das versetz im mit dem schilt vnd **arbait** mit deiner wer das er nit zu dir kan als Ich dich vor gelernt hab

77 Rostock, Universitätsbibliothek, *Mss. var.* 82.

78 Bistu ein starck man, vnnd wilt ritterlichen kummen vonn aller deiner wer biß ann degen, mach dir ein großenn knopf an dein Schwert, der da ab laufft, vnnd nim dein schwert in die linckenn handt, beÿ dem gehiltz, vnnd legs auf denn arm, vnnd de[n] Spies in die Rechtenn hanndt, tzu dem schus, vnnd denn schildt las fallenn. Oder nim denn Spies tzu dem schwert, als du dann tzu

trittst, so nim denn knopf vom schwert, vnnd wirf im tzu, wen er das weren wil, so scheus im tzu mit dem Spies oder mit dem schwert. Bistu der krencker so las Inn verwerffenn vorschießen, das versetz im mitt dem schilt, vnnd arbeit mit deiner wer, das er nit zu kom, als ich dich vor gelert hab.

79 Copenhagen, Det Kongelige Bibliotek, *Thott 290 2°*.

80 Inventory number A 168. Southern Germany, around 1500. Length 123 cm, width 18.5 cm. The *Katalog der Leibrückkammer, II. Teil* refers to this sword as a “fencing sword”, a “type of sporting arm, documented in the fencing literature” (p. 186, fig. p. 96). Nevertheless, this is rather doubtful due to the acute point. The ricasso in the middle of the blade, however, makes it ideal for use in the “armoured hand”, i. e. with the left hand in a steel gauntlet grasping the blade.

THE MANUSCRIPT

EDITORIAL GUIDELINES

The text of the transcription on each right-hand page undearneath the image follows the original handwriting as closely as possible. This includes not only word-for-word fidelity, but also punctuation, as well as the use of capital and small initial letters. The punctuation follows the manuscript, though some final sweeps have been omitted; the capitalization closely follows that of the manuscript and even interior capital letters (*gewInnen*) have been retained. When in doubt, we chose a lower-case letter.

Crossed-out or underlined passages have also been retained, and the alignment matches the original. The use of umlauts (particularly *v* and *ÿ*) is retained, as well as the richness of variety in Early Modern High German vocabularies (*krafft* and *kreffft*, for instance, are used equally and are not adjusted here). Furthermore, the vocalic or consonantic letter *v* has not been adjusted, meaning that a vocalic *v* is not represented by *u*.

We have resolved the numerous abbreviations. To make this clear without impairing readability through an overabundance of brackets, these amendments are set in a shade of grey.

Additions and completions—either those that follow logically from the context, or those that restore lost passages based on the two *Gladiatoria* manuscripts from Cracow and Vienna—are set in square brackets.

The various page, leaf, or technique numberings are left untranscribed.

In order to facilitate a better understanding of the original sequence of the manuscript, we have decided to offer not only the current folio numbers in large red figures on the top left of each left page, but also the presumed original number in small print in brackets. This foliation follows the assumed reconstructed version that can also be seen in table II on page 239. See also “A Long Time Ago ...” on page 215.

Note the fourth piece.¹ If he has thrown his spear at you, then grasp

your spear with all of your strength, and thrust at him with all force. If he thrusts at you with all of his strength, then strike away² his thrust with your left hand, catch it under your left armpit, and hold [it] tight. Take your sword for the throw, and cast [it at] him where you can best reach him.

Merckch das vyerdi stuckch ober seinen spjës hett auff dich geschossen So nym deinen spjës zw gantz krefft vnd stich auff in mit gantz krafft ob er mit gantz sterckch auff dich stech so slach mitt deiner tenken hant im den stich aus vnd vach in vnder dein tenkchs v'schen vnd halt vest vnd nim dein wert zw dem schiüs vnd schaus in wo dw in am pesten mußt gewinnen

1V^(3V)

SPEAR

Note the fifth piece. When you have already thrown your spear, and he attempts to rush³ at you with his spear, then take your sword in

both hands, and strike his thrust away from below and upwards. When you have beaten the thrust aside, then grip your sword in the armoured hand,⁴ and work⁵ against him with strength.

Merkh das funfft stück ob dw deinen spyes aber hetest verschossen vnd er dich mit seinem spyes wolt vbereyllen So nymb dein swertt in pede hentt vnd slach von vntt en auff ym aus den stich vnd ii ym hast den stich ausgelagen So vas dein swertt zw gewappten hant vnd aribait in yn mit sterkch

2R (4R)

SPEAR

Note the sixth piece. If you have thrown your spear at him, and he rushes at you with his thrust so that you can't reach for your sword, then pull out your dagger, and strike his thrust away with your dagger, so that the thrust passes forwards to your left side, and rush at

him⁶ so that you can rob him of his spear.

Merkch das Sechst stukch ob dw deinen spyes hetst auf in verschossen vnd das er dich mit seinem stich vber eyllett das dw nicht zw deinem swertt machst kömen So czuchh aus deinen degenn vnd slach ym den tisch aus mit dem degenn das der stich neben der tenken seytt n für gee vnd lauff mit ym ain das dw in auch pringst von dem spyes

2V (4V)

SPEAR

Note the seventh piece. When you have both lost your spears, and if he can get his sword, and strikes strongly downwards at you, then take your dagger in both hands, and catch the sweeping strike between your two hands on the dagger. Thus you will come to wrestle with him for the sword.

Merkch das Sübnt stukch das ir paid von den spyessen komen seÿtt ob er zw seinem swert wer kömen vnd slüg von krefft en nyder auff dich So nymb deinn degenn in pede hentt So vach den straich zwischen deiner peder hentt auff den degen So kumst dw mit ym zw [ringen](#) vmb das swertt

3R (5R)

SPEAR

Note the eighth piece. Then take your spear strongly to throw it, and observe if you can hit him, so that the throw is not made in vain. Now see if he throws [the spear] at you, then grasp your spear strongly for the thrust, watch where you can hit him well, and hold your spear as far in front as you can.

iv [Merkch das acht stukch So nymb deinen spyas mit stercken zw dem schusz vnd merckh ob dw mügest treff n das dw den schuss nicht vmb sunst tüst nw schaw ob er auff dich schüss So nym deinen spyas zw sterckch des stich vnd schaw auff yn wo dw mügest recht treff en vnd halt dich des spyas als lenginst das dw machst]

3V (5V)

SPEAR

Note the ninth [piece]. When he has taken his ecranche⁷ in his left hand, grabbed the spear for the throw, and goes around you and looks where he can hit you well with the throw, then take your spear and ecranche together, put them in front of yourself on the ground, take your sword in your right hand, and wait for the throw that he intends to make at you.

v [Merkch das Newnt ob er sein tarschen hett genamen in sein tenckche hant vnd den spyen hett
 gevast zw dem schuss vnd gieng vmb dich vnd schawet wo er dich recht an wolt treff n mit dem
 schuss So nymb deinen spyen vnd tatschen zw sammen vnd setz für dich auff dy erd nym dein swert
 in dein rechte hant vnd wart auff den schuss den er dir gemaynt hat]

4R (6R)

SPEAR

Note the tenth [piece]. If he has dropped his ecranche, and grasped his spear and sword together, then powerfully thrusts at you with strength, and wants to press at you strongly, then take your spear and ecranche together, set yourself against him fiercely with strength, and keep yourself as far [away] from him as you can.

vi [Merkch das zehent ob er sein tatschen hett lassen vallen vnd sein spyes vnd swert zw samb gevast hett vnd kreffft ikleichen auff dich stech mit sterkch vnd wolt dich hertt ikchleichen aribaitt en So nymb dein spys vnd tatschen zesamb vnd setz dich hertikchleichen mit sterkch wider in vnd halt dich des als lengist dw machst]

4V (6V)

SPEAR

Note the eleventh [piece]. If he has taken his ecranche in his left hand, and brought his spear upwards for the throw, and attempts to throw at you, then take your sword and ecranche together in the left hand, watch carefully for his throw, and catch it on your ecranche. When he has thrown his spear, then jerk your spear upwards for the throw, and immediately throw it at him wherever you can hit him. Thus you will freely come to your sword.

vii [Merkch das Aindlefft ob er seine tatschen hett genomen in sein tenke hant vnd het genomen seinen spyes vbersich auff zw dem schuss vnd wolt dich schiessen So nymb dein swert vnd tatschen zw samb in dye tenkch hant vnd merkch eben auff seinen schus vnd vach den auff dein tatschen wann er seinen spyes verschossen hat so würff deinen spyes vbersich auff zw dem schos vnd scheus fluchs auf in wo dw in treff en kanst So kumst dw fr ey zw deinem swert]

4R (7R)

SPEAR

Note the twelfth [piece]. If you want to finish him quickly, then take your spear and sword together on your arm, unscrew the pommel from your sword, and throw it at him forcefully. Run at him after the throw, and use the sword or the spear, whichever you consider appropriate. If he throws the pommel at you in this way, then set your ecranche in front of yourself and catch the throw with it. Hold your spear in front of yourself in your right hand, ready to thrust. Protect yourself from him, so he can't run at you as he intends to do.

Merkch das zweliff ob dw wilt reschleich mit ym entt en So nymb deinen spy[e] vnd swert zw samb an den arm vnd schrawff ab den knöph von deinem swertt vnd wirff hertikchleichen^{viii} in in vnd lauff nach dem würff mit ym ein vnd [nütz]^{ix} swert oder spyes welichs dir eben sey ob er also auff dich wurff mit dem knopph So nym dein taschn für dich vnd vach darauff den wurff vnd nym den spyes für dich in die recht hant zw dem stich vnd rett dich sein das er dir nicht in lauff als er yndem synne hatt

5V (7V)

SWORD

Note the beginning of the short sword.⁸ When you have approached your opponent in the lists⁹ with all your weapons together – spear, ecranche, sword, and also your dagger – and you have thrown your spear and lost your ecranche, then take your sword in the armoured hand, as you have learnt, and turn¹⁰ it upwards over your head to

thrust from above, as you see painted above.

Merkh den anefankch des kurczn swertt vnd wenn dw in die schrenckhn bist kom[en] [z]w deinem veint vnd dw alle dein wer peyeinander haste Spies taschen vnd swert vnd auch deinen degen vnd das dw deinen spyes verschossen hast vnd von deiner taschen komen bist So nymb dein swertt zw gewappten hannt als dw es gelernt hast vnd wint es vbersich vber dein haupp zw dem stich von oben als dw es oben gemalt siechst

6R (8R)

SWORD

Note a piece. When he has raised his sword above himself to thrust, and tries to thrust towards your face with strength, then be alert and thrust with the point of your sword moving upwards from below over his left arm and under his sword, and lift with your point strongly

upwards. Thus [you] will tear his hand away from the sword, as you see painted.

Merkch das stuch wenn er hatt sein swert vbersich auff geworff n zw dem Stich vnd wil dir hertt
 ichleichen stechen zw dem gesicht So merkch auf vnd stich von vntt en auff mit deinem swertt vber
 seinen tenkn arm vnder sein swertt mit deinem ortt vnd heb mit deinem ortt vest vbersich So prichst
 ym dñ hantt ausdem swertt als dws gemalt siechst

6V (8V)

SWORD

If he thrusts at you moving upwards from below towards your visor [and] face, and wants to hit you there strongly, then look, grasp your sword short, and watch him closely so that when he strives to thrust at your visor, you hit the inside of his palm with your thrust. Thus you

deprive him of his hand, and he will not be able to use it well any more.

Ob er dir stech von vntt n auff zw de[inem] visyer des gesichst vnd wolt dich darIn hertt ikchleihn
versuechen So schaw vnd nymb dein swertt churcz vnd schaw eben auff in wenn er dir wolt stechn
zw dem visyer das dw in trefst inderhalb des Tenrss mit deinem stich So entt werst dw ym der hant
das ers nicht wol mer mag genueczn

7R (12R)

SWORD

Note a piece, which is called the way of the joints.¹¹ When both thrust at each other with all of their strength, and you want to execute this piece against him, then thrust from the outside of his sword with the point towards him. Drive your pommel between his two hands, catch

him with the pommel over his right hand over the wrist, and pull strongly towards yourself. Thus you will break his arm or throw him, as you see painted above.

xi [Merck daz stuck daz man heißet die straß der glider Wann einer gen den anderen stech mit ganczer krafft vnd du daz stuck wilt vf In treiben So stich außserhalb seines swertz mit dem ort gen Im vnd var mit deinen knopf zwischen seiner beider hend durch vnd greif Im mit dem knopf vber sein rechte hant vber daz glid vnd ruck vast an dich So brichst Im den arm oder wirfest In als du es oben gemalet sichst]

7V (12V)

SWORD

.....

Note the second piece of the way of the joints. When both thrust at each other, and you want to carry out this piece, then thrust to him yet again outside of his sword, move your pommel between his two hands, catch him with the pommel from the outside over his left arm, and pull strongly towards yourself. Thus you will break his arm or throw him as you see painted above.

xii [Merkch daz ander stukch der straß der glider wan einer aber den vff den andern stech vnd aber daz stukch treiben wil So stich Im aber außßerhalb dez swertz vnd var Im durch mit deinem knopf **Innerhalb** seiner beyder hend vnd greiff Im mit dem knopf außßerhalb vber sein tencken arm vnd ruck vast an dich So brichstu Im den arm oder wirfestu In als du es oben gemalt sichst]

8R (9R)

SWORD

.....

If he thrusts at you with all of his strength towards the body from below, then thrust [at] him from above through between his left arm and the sword and lift with the pommel upwards, as you see painted above.

Ob er dir stech mit gancz krafft von vnden auff zw dem leib So stich ym von oben zwischn seins
tenckhn arm vnd swert durch vnd heb vbersich mit den knopff als dw es obenn gemalt siechst

8V (9v)

SWORD

If you have both thrust towards the face from the inside of each other's swords, then press his point downwards with your sword. With your pommel, go between his left hand and the sword from above and pull strongly towards yourself, as you see painted above.

Ob sy bayd ainer den andern ynnerhalb der swertt zw dem gesicht stäch So trib mit dinem ^[?]^{xiii} swertt sein ortt vndersich vnd greyff mit deinem knopph von oben zwischn seiner tenkn hant vnd Swert durch vnd czukuch vast an dich als dw es obn gemalt siechst

9R (10R)

SWORD

If he has put his right foot forwards, and strikes with a murder strike¹² at your head from above, then catch this strike on your sword between your two hands, step with your left foot to the outside of his right foot, and hit his neck from the left side with your point. Thus you will throw him backwards, as you see painted above.

Ob er den Rechten fües hett für gesetzt vnd slüeg dir obn den **mordslag** zw dem haubtt So vach
den slach zwischn bayder deiner hennndt auf dein Swertt vnd schraytt mit deinem tenckn fues
ausserhalb seins Recht n fües vnd greyff mit deinem ortt an seinen hals zw der tenckn seytt en So
wirff estu ym vber rukch als dw es oben gemalt siechst

9V (10V)

SWORD

If he has put his left foot forwards, and strikes at your head with the murder strike from above, then catch this strike on your sword between your two hands. Step forwards to the outside of his left foot with your right foot, and catch his neck with your pommel on the right side. Thus you will throw him backwards, as you see painted above.

Ob er seynn tencken fües hett fürgeseczt vnd slueg dir von obn den mordslag zw dem hawpph So
 vach den slag zwischen bayd deiner hernde auff dein Swertt So schraytt für mit deinem rechten fues
 ausserhalb seins tencken fues vnd greyff mit deinem knopph zw seinem hals an der rechten seytt en
 So wirff estu jm zw [ru]kch als dw es obn gemalt siechst

10R (11R)

SWORD

If he has turned his pommel forwards, and strives to shatter your left arm between the elbow and shoulder, then throw your sword forwards to the side, and turn your point upwards. Thus you have parried the strike, as you see painted above.

Ob er seinen knopff hyett für gechert vnd wolt dir damit deinen tencken
arm zwischen deins ellbogen vnd der achsell ab slachn So wirff dein swert
für nach der seyten vnd ker dein ort vbersich So hastu den slag verseczt
als du das oben gemalt sehest

Ob er seinen knopff hyett für gechert vnd wolt dir damit deinen tencken
arm zwischen deins ellbogen vnd der achsell ab slachn So wirff dein swert
für nach der seyten vnd ker dein ort vbersich So hastu den slag verseczt
als du das oben gemalt sehest

10V (11V)

SWORD

If he has turned his pommel forwards, and strives to shatter your right arm between the elbow and shoulder with it, then throw your sword forwards to the side, and turn your point upwards as well. Thus you have blocked his strike, as you see painted above.

Ob er hett seinen knopp für gekertt vnd wolt dir damitt deinen rechten arm zwischen deins
 ellpogens vnd der achsell ab slachen So wirff dein swert für nach der seyten vnd ker dein ortt aber
 vbersich So hastu den slag verseczt als dw es oben gemalt siechst

11R (13R)

SWORD

When you thrust towards his face inside of his sword, then grasp his
 left hand behind the wrist with your left hand on your sword. Step
 inside his left foot with your right foot, and lift his arm upwards with
 your sword. Thus you will throw him forwards, as you see painted
 above.

Wenn du Im stichst ynnerehalb seins swerts zw den gesicht So nymb sein tenke hantt hinder den glid
mit deiner tenken hantt zw deinem swertt vnd schraitt mit deinem rechten fues Innerhalb seins
tenken fues vnd heb ym mit deinem swertt seinen arm vbersich So wirff estu Im fürsich als dw es obn
gemalt siechst

Wenn du Im stichst ynnerehalb seins swerts zw den gesicht So nymb sein tenke hantt hinder den glid
mit deiner tenken hantt zw deinem swertt vnd schraitt mit deinem rechten fues Innerhalb seins
tenken fues vnd heb ym mit deinem swertt seinen arm vbersich So wirff estu Im fürsich als dw es obn
gemalt siechst

11V (13V)

SWORD

This is the break.¹³ Take note: grasp his left side under his left arm with your left arm, grasp his right knee-bend with your right hand from the outside, and lift upwards. Thus you will throw him on his back, as you see painted above.

Das ist der pruch nw merkch greyff mit deinem tenken arm in seine tenke syt[en] vnder seinen
 tenken arm vnd greyff mit deiner rechten hant auswendig in sein rechte knyepüg vnd heb vbersich So
 wirff estw im auff den Ruckh als dw es oben gemalt siechst

12R (14R)

SWORD

When you again thrust at his face inside his sword, grab his left hand behind the wrist with your left hand on your sword, step with your left foot inside his left foot, and lift his arm upwards with your sword. When you have brought him to this point, then let your left hand leave the sword and quickly grasp over his neck. With your right hand grasp his left thigh from the inside. Thus you will throw him away from yourself, as you see painted above.

Wenn dw ym aber stichst Innerhalb seins swert zw dem gesicht So nym se[in] tenke hantt hinder den
 glid mit deiner tenken hantt zw deinem swert vnd schrai[tt] mit deinem tenken fues ynnerhalb seins
 tenken fües vnd heb mit deinem swert seinen arm vbersich wann dw in darzw pracht hast So la
 varn die tenke hant aus dem swert vnd greyff ym damit reschleich vber den hals vnd mit deiner
 rechten hant vass sein tenks diech Innerhalb So wirff estu in von dir als dw oben gemalt siechst

12V (14V)

SWORD

Grasp over his back and under his right armpit with your left arm, and his left thigh from the outside with your right. Pull strongly towards yourself. Thus you will throw him to the ground in front of you, as you see painted above.

Nw merkch den pruch auf das stukch Greyff mit deinem tenken arm vber seynn rukch vnder sein rechtt e vgsenn vnd mit deiner rechten hant ausserhalb an sein tenkchs diech vnd zukch das vast andich So wirff estu In vor dein nyder als dw es oben gemalt siechst

13R (15R)

SWORD

Perform this piece that you know well to conquer his back with. Then lift him straight upwards, strike him with your left knee to the outside of his left knee, and swing him down in front of yourself, as you see painted above.

Das stukch nymb für dich als dw wol waist damit dw Im angewInnst sein ruken So heb In gerad
vbersich auff vnd slach vnd slach [!] ym mitt deinem tenkn knÿe ausserhalb an sein tenks chnÿe vnd
swing In für dich nyder als dw es oben gemalt siechst

13V (15V)

SWORD

Note the piece. When both of you have thrust strongly at each other towards the body, then grasp his left hand at the wrist and both swords together in your left hand, go through with your pommel under his right arm, and jerk strongly upwards. Thus you have taken his sword, as you see painted above.

Merkh das stukch wenn es bayd stecht mit krafft Zu dem leib So nym sein [t]enke hant bey dem glid vnd bayde swertt zw samb in dein tenke hant var [i]m mit deinem knopph v'nder seinen rechten arm durch vnd rukch vast vber sich So hastu ym sein swert entt wert als dw es oben gemalt sichst

14R (16R)

SWORD

Note the break. Take both points in your left hand, and jerk strongly towards your left side. Grasp him with your left hand over his back, under his right armpit and grasp his left thigh from the outside with your right hand. Throw him in front of yourself, as you see painted above.

Mer den pruch nym bayde ortt in dein tenke hant vnd rukch vast an de[in] tenke seytt en vnd greyff
mit deiner tenken hant vber seinen ruken vnder seine recht vgsen vnd greyff mit deiner rechten hant
ausserhalb an sein tenkchs diech vnd wirff in von dir als dw es oben gemalt siechst

Mer den pruch nym bayde ortt in dein tenke hant vnd rukch vast an de[in] tenke seytt en vnd greyff
mit deiner tenken hant vber seinen ruken vnder seine recht vgsen vnd greyff mit deiner rechten hant
ausserhalb an sein tenkchs diech vnd wirff in von dir als dw es oben gemalt siechst

14V (16V)

SWORD

Note the counter-break. Catch him around his whole body with your left arm. Pull him strongly towards yourself, grab his left knee with your right hand. Throw him with a wrestling technique as you see painted above.

Merkch den wider pruch vass in mit deinem tenkn arm vmb ganczn seien leib drukch in vast zw dir vnd greyff mit deiner rechten hant auf sein tenks knye vnd wirff in mit dem ringn als dw es oben gemalt siechst

15R (21R)

SWORD

Note the piece: the beginning of the scissors. If one has grasped the other one's sword by the point, then throw yourself to the other side of the swords, as you well know. In this way you will free your sword from him. Hold his point still and thrust with your sword over his grip inside his right elbow. Lift upwards, and thus you will deprive him of his sword, as you see painted above.

Merkch das stukch anefang der *scher* ob ainer dem andern aber das swert bey dem ortt hett ergriff
 enn So wirff dich durch die swert als dw wol wayst So hastu dein swertt von Im geledigt vnd halt
 sein ortt vest vnd stich mit deinem swertt vber sin pant Innerhalb seins rechtn ellpugn vnd heb
 vbersich So ist er seins swerts entt wert als dw es oben gemalt sichst

15V (21V)

SWORD

Note the second piece of the scissors. If he attempts to throw himself to the other side of the sword, then watch for the moment when he turns his back to you. Then throw both swords crosswise over him, and keep him close to yourself, as you see it painted above.

Merkch das and ten litz der scher ob er sich aber wolt durch das swert werff n So schaw als pald er dir deinen ruken chertt So wirff beyde swert krewts weis vber in vnd halt in vest zw dir als dw es obn gemalt sichst

16R (22R)

SWORD

Note a break against both pieces of the scissors. If he has thrown both swords over you, then drop your sword. Grasp the blade of his sword with your left hand and his handle above his hand with the right hand. Thus you have lost your sword, and taken his, as you see painted above.

Merkch den pruch bayder Stukch der schër ob er waid swert vber dich gew[orff en] hett So lasse
valln dein Swert vnd greyff mit deiner tenkn hant In sein s[werts] chlingen vnd mit deiner rechten
hant ob seiner hant In das pant So bistu [von] deinem swert komen vnd hast Im das sein genomen
als dw es oben gema[lt] siechst

Merkch den pruch bayder Stukch der schër ob er waid swert vber dich gew[orff en] hett So lasse
valln dein Swert vnd greyff mit deiner tenkn hant In sein s[werts] chlingen vnd mit deiner rechten
hant ob seiner hant In das pant So bistu [von] deinem swert komen vnd hast Im das sein genomen
als dw es oben gema[lt] siechst

16V (22V)

SWORD

Note the piece. If you have both thrust at each other from the outside of the swords towards the face, and [he] attempted to turn your point away, then push strongly away from yourself with the point. Let go of the sword with your left hand, grasp his pommel with it, and lift upwards. Thus you will turn him away from yourself so that he turns his back to you, as you see painted above.

Merkch das Stuck ob ir bayd ainer den andern het gestochen aussershalb des [s]werts zw dem gesicht vnd dein ort aus hett welln wendend So druckch vast [v]on dir mit deinem ort vnd lass varen dein tenke hant aus dem swert vnd greyff damit nach seinem swert knopff vnd heb vber sich So wenndestw in von dir das er dir kertt den rukch als dw es oben gemalt sichst

17R (23R)

SWORD

Note a break. Let go of the sword as soon as he has grasped the pommel, and hit his arm behind his left elbow with it. Thus you will do to him what he wanted to do to you, as you see painted above.

Merkch den pruch als er dir nach dem knopff hatt griff enn So lass varn dein rechtt e hant aus dem swert vnd stoos in damit hinder seinen tenckn ellpogen an dem arm So pringstu in darzw als er dir vor hett wellen tün als dw es oben gemalt siechst

17V (23V)

SWORD

Note the piece. If both swords meet when thrusting to the face from the outside, then catch the hollow of his left knee with your pommel from the outside. Pull strongly towards yourself, and hit him with your left elbow at his breast. Thus you will throw him backwards away from yourself, as you see it painted above.

Merkh das stukch ob bayde swertt mit dem stich ausserhalb begegnet an ain ander zw dem gesicht
 So greyff mit deinem knopff ausserhalb sein tenckh knyepug vnd rukch vast an dich vnd stoos in mit
 deinem tenckh ellpogenn in sein prust So wirff estu in von dir vber rukch als dw es oben gemalt sichst

18R (24R)

SWORD

Note the break. Drop your sword and grasp over the neck at his right shoulder with your left hand. With your right hand, grasp his left thigh from the outside and jerk him upwards. Thus you will throw him down, as you see it painted above.

Merck den Pruch last vally dein swertt vnd greyff mit deiner tenken hant vber den hals auff sein
 rechtt e achsell vnd mit deiner rechten hant vass in von aussenn seins tenkches diech vnd rukch in
 vbersich So wirff estw in nyder als dw es obn gemalt siechst

18V (24V)

SWORD

Note the piece. If both have thrust at each other inside the swords towards the body, then push his point downwards with your sword and catch the hollow of his left knee with the pommel. Pull strongly towards yourself and hit him in his left armpit with your head. Thus you will throw him backwards, as you see painted above.

Merkch das stukch ob aine den anden hett gestochenn Innerhalb des swerts In den leib So drukch mit deinem swertt sein ort nyder vnd greyff mit dem knopff in sein tenke chnye püg vnd rukch vast andich vnd stos in mit deinem haupp in sein tenke chnyepug vgsenn So wirff estu in vber rukch als dw es obenn gemalt siechst

19R (28R)

SWORD

Note the piece. If both have thrust at each other strongly towards the breast in such a way that both swords came together on the outside of the bodies, then lift his point strongly upwards with your sword, lift your left foot, and dislocate his leg at the knee, as you see painted above.

Merkch das Stukch ob ainer den andern hertt ichleich hett gestochenn zw [der] prüst vnd das die Swertt ausserhalb der leib aneinander wern komen So [heb] mit deym swertt sein ortt starkch vbersich auff vnd heb auff deyn^{xiv} fues vnd st[os] ym ab sein pain in dem knye als dw es obn gemalt siechst

19V (28V)

SWORD

Note the break. When he attempts to break your left leg with his foot, then pull this foot backwards, step in front of his left foot to the outside with your right foot and catch the right side of his neck with the pommel. Thus you will throw him on his back away from you, as you see painted above.

Merkch den pruch als er dir mit seinem füs hatt wellenn abstossenn sein^{xv} tenks [p]ain So czukch den selbn füs hindersich Schreytt mit deinem rechten fües aussn [fü]r seinen tenken fuessen vnd greyff in mit dem knopff zw der rechten seytt en seins hals So wirff estu in von dir an den rukn als dw es oben gemalt siechst

20R (29V)

WRESTLING

Note the wrestling piece of the scales. When you have both thrust towards each other's faces from the outside of your swords, then let your right hand leave the sword, and hit him with it at his left arm behind his elbow. Step with your right foot behind his left foot, and move with your right arm strongly around his body. Thus you will throw him, as you see painted above.

Merkch das stukch des ringen aus der **wag** wenn Si waide zw ein ander stechn ausserhalb^{xvi} der swertt zu dem gesichtt lass varen dein recht e hantt aus dem swertt vnd stoos in damitt an seynn tenkn arm hinder den ellpogn vnd schreit mit deinem rechten fues für seinen tenkn fues rukchalben vnd var resc[h] mit deinem rechtn arm vmb seinen leib So wirffstu in als dw es obn gema[lt] sichst

20V (29R)

WRESTLING

Note the piece. If you have come together and begun wrestling, having both lost all your weapons, and he has now quickly recovered his sword, steps forward with his right foot, and strives to strike you down with all of his strength, then put your left foot forwards, and lay your left arm over your right arm. Catch the strike on your two arms in front of the elbows, and grasp his neck with your left hand [...]

^{xvii}Merck das Stuck als es ped mit ringh zw sammen kumen seytt vnd daz ainer den andern gar von seiner wer pracht hatt ob er nw reschleich wider komen wër zw seinem swert vnd für schritt mit seinem rechten fues vnd wolt dich mit ganczer krafft slachen darryder So secz deinen tenken fues für vnd leg deinen tenkn arm auff deinen rechten arm vnd vach den strach auff pede dein arm vor des ellpogns vnd greyff mit deiner tenken hant Im seinen hals^{xviii}

21R (30R)

WRESTLING

Note a wrestling piece. When you have both lost your weapons, and grabbed each other to wrestle by the arms, and both hold each other strongly, then try to strike his arm away with strength. If he holds tight and will not let it go, then move your right arm to the side of his

thumb. Strike the inside of his elbow and quickly grasp his left hand with yours. In this way, you will force it behind his back. Step in front of him with your right foot. In this way, you will throw him as you see painted above.

Merkch das stukch des ringn als sy baid seynn komen von der wer vnd zw ein ander greyff enn ze ringn aus dem arm vnd ainer den andern vestickleich hat gevast So versuch mit sterkch aus ze slachen seynn arm hat er vest vnd wil nicht lassen So var mit deinem rechten arm dawmen halbn durch vnd stos [im] den ellpogn einwärts vnd greyff resch mit deiner tenken hant nach seiner tenken h[ant] So nött stu lms hinder den rugk vnd schreyt mit deiem rechtn fus für in S[fo] wirff estu In als du es oben gemalet sichst]xix

Note this, another wrestling piece. When he has grabbed his sword again, hurry and prevent him from grasping it with both hands. If he throws his left hand forwards, and thrusts towards your breast, and tries to prevent you from coming towards him, then quickly grasp his left hand with your right hand, and step forward. Step forward with your head under his armpit and your left arm around his body below. Thus you will throw him over your back on his head, as you see painted above.

Merkch aber ain stukch von Ringen das er wider hatt pegriff enn sein Swertt so eyll resch das es nicht wegryff in sein bayd hennndt ob er die tenckh hant für würff vnd stiess dich in dein prust vnd wolt dich nicht In Im lassen So greyff mit deiner rechten hant resch nach seiner tenkn hant vnd schreytt für vnd var Im durch sein tenke seytn vgsen mit dein haupp vnd mit dein denken arm vnden vmb den leib So wirff stu In vber deinen rukch [auf sein haubt]xx als dw es oben gemalt sichst

Note the break. When he attempts to grab you, jerk your left foot towards yourself and grab him in the same manner he attempted to grab you. Drop your sword, and grasp him by his left thigh. Thus you will throw him to the ground away from you, as you see painted above.

Merkch den pruch als er dich hatt wellenn vassenn So zukh dein tenkn fues an dich So wegreyff
estu in gleich als er dich hatt wellenn vassenn lasse valln dein swertt vnd greyff In nach seinem tenkn
diech So wirff estu in von dir auff dñ erd als dw es obn gemalt siechst

Note the piece. When you thrust towards his face from the inside of the sword and he strives to parry it, then push his sword downward with your point. Thrust your sword towards his neck and let go of the sword with your left hand. Reach around his neck and grasp your sword's grip again on his right side. Thus you have confined him. Thrust with your dagger as you see painted above.

Merkch das stukch wann dw in Innerhalb des Swerts stichst zu dem gesicht ob er dir den stich wolt versetzen So druckch mit deinem ortt sein Swertt vnder sich vnd stos mit deinem swertt an den hals vnd la varen dein tenke hant aus dem swertt greyff Im zw der rechten seytt enn vmb den hals wider in dein pant So hastu yn geschlossen vnd stich mit dein degenn als dw es oben gemalt sichst

Note the piece. When both of you have strongly thrust towards each other's faces outside of the swords, and he attempts to push your point away with strength, then let your point go and step behind his left foot with your right foot. Hit his neck with your sword between your two hands. Thus he will fall, as you see painted above.

Merkch das stukch wenn ainer dem andern ausserhalb der swert zw dem ges[icht] sticht vnd dein
 ortt mit sterkch welle austreiben So lass nach dem ort vnd schraytt mit deinem rechten fues hinter
 seinen tenkn fues vnd stos mit d[einem] swert zwischen bayder deiner hent Im an den hals So velt
 er als dw es o[ben] gemalt siecht

Note a piece. If each of you has set your point on the other's breast, then do not forget the work¹⁴ that comes from it, which you know well and is painted hereafter.

Merkh das stukch wenn ainer dem andern das ort an die brusst hat gesezt [ver]gis nicht der arbeits die daraus gett als du wol waist vnd hernach [ge]malt ist

Note the break. If he has turned you away from himself with his

sword, then grasp him about his neck with your left arm. Grasp him under his right armpit with your hand and drop your sword. Grasp his left thigh from the outside with your right hand and lift upwards. Thus you will throw him, as you see painted above.

Merkch den pruch ob er dich hett geriden von Im mit sejm swertt So greyff mit deinem tenken arm vber seynn hals vnd vass in mit deiner hant vnder sein[en] rechtn vgsen vnd lass vallen dein swertt vnd greyff mit deiner rechten hant von aussen in sein tenkes diech vnd heb vbersich So wirff estu in als dw es obn gemalt siechst

the outside of the swords, let go of the sword with your left hand. Move your sword under his right armpit and quickly grasp the point again. Lift up, and you will force him to fall, as you see painted above.

Merck das stukch wenn ir stecht ausserhalb der swertt zw ganczn leib So la varn dein tenke hant aus deinem swertt vnd küm ym durch mit deinem swertt durch seinem rechte iügen vnd greyff reschleich wider nach deinem ortt vnd heb vber sich So nott estu In zw dem vall als dw es oben gemalt sichst

25R (20R)

SWORD

Note the break. Turn forcefully as soon as he has thrust under your

armpit. Throw your sword towards the left side of his neck so his head is between the sword and your arm. Pull him down to the ground, as you see painted above.

Merkch den pruch als er dir hatt gestochen durch dein vgsen So czukch di[ch] vmb mit chrefften vnd wirff j[m] dein swertt ze der tenkchen seytten vnd an d[en] hals damit sein haubt kom zwischen swertt vnd deins arms vnd ruck[h] in wider^{xxi} zw der erden als dw es obn gemalt sichst

25V (20V)

SWORD

This piece also belongs to the pressing¹⁵ on the breast. When you both have grasped each other's point in your hands, then jerk your sword strongly towards yourself. If he strives not to yield it to you, then

throw the pommel at his right side. Grasp his left knee from the outside with your left hand. Pull towards yourself and strike his left shoulder with your right hand. Thus you will throw him, as you see painted above.

Das stukch ist auch von dem [dringen an die prust](#) komen das ainer dem andern sein ortt hatt ergriff enn in die hant So zuckh dein swert vast an dich wil er dirs nicht lassen So wirff ym deinen knoph in sein rechte seytn vnd greiff mit deiner tenken hant aussen an sein tenkchs knye rukch an dich vnd stoos mit deiner rechtn hant auff sein tenke achsell So wirfestu in als dw es oben gemalt sichst

then grasp his left wrist with your left hand. Push him away from you with your point so that you can bring his point under your left armpit. Then thrust your sword against his foot, as you see painted above.

Wenn es mit sterckh an die prüst mit den örtern habt gedrunge So greyff mit deiner tenkn hant^{xxii}
vnd stoos in mit deinem ortt von dir damitt dw sein ortt vnder dein tenkche üggen pringest So stich In mit dem swert
in sein fües als dw es oben gemalt siechst

26V (18V)

SWORD

Take careful note of this piece. If you attempt to strike the outside of his left knee with your pommel and he notices this and attempts to parry the strike, then hold fast and thrust through from the outside of

his sword under his left leg. Turn him away from you, as you see painted above.

Merkh das stukch wesunder Dw Im zw slachen aussenn zw seinem tenkn knye mit deinem knopf wirt er sein gewar vnd wil verseczen den slag So halt an dich vnd stich aussen seins swertt s vnder tenken pain durch vnd reyd in von dir vmb als dw es oben gemalt siechst

27R (26R)

SWORD

Note the work¹⁶ of the plate gauntlet. If he throws himself around towards you, and attempts to twist himself out, then step in front of his left foot to the outside with your left foot. Grab him around his whole body with your left arm and hold your point strongly in his

gauntlet. Thus you will throw him. However, if he has brought you into the same situation as you did to him before, turn to him and hit his left arm behind his elbow with your right hand to move him away from you. Thus you will free yourself from him.

xxiii Merkch die arbeits des plechhantschuech**xxiv** ob er sich gegenn dir vmb würff vnd sich aus reydenn wolt So schraitt mit deinem tenkn fues für seynn tenkn fues ausserhalb vnd greyff ym mit deinem tenkn arm vorn vmb seinen ganzcn leib halt dein ortt vast in seinem hantschuech So würff stu in ob er dich hett d[ar] zw pracht als ym vor wider varen ist So cher dich gen ym vnd stoos mit de[in]er rechten hant an seinen tenkn arm hinder den ellpogenn von dir so wirstu von Im [ledig]

Note the piece. If you both thrust at each other towards the face outside of your swords, then press his point strongly upwards with your sword. Step through with your left foot between his two feet. Grab around his body with your left arm, and his left knee-bend with your pommel. Thus you will throw him, as you see painted above.

Merkch das Stuckh wenn ainer denn andern Sticht aussershalb der swert zw dem gesicht so dring mit deinem swertt sein ortt starkch vbersich auff vnd schreytt mit deinem tenkn fues zwischen seiner paider füs durch vnd greyff mit deinem tenkn arm vnd^{xxv} seinem leib vnd mit deinem knoppff in sein tenke chnyepig So wirff estu in als dw es obn gemalt siechst

Note the break. If he strives to throw you backwards in this manner, then grab him under his left armpit over his neck with your left arm. Step with your left foot to the outside of his left foot, and grasp around his left arm above the elbow with your right hand. Throw him down at your feet, as you see painted above.

Merkch den pruch wenn er dich hett welln also werff enn vber rukch So greyyff in mit deinem tenkn arm vber seynn hals vnder sein rechtt e vgsenn vnd schre[yt] mit deinem tenkn fües ausserhalb seins tenkn fües vnd greyyff mit deiner rechtn hant vmb seinen tenkn arm ob des ellpogen vnd wirff in gegenn dir nyder als dw es obn gemalt siechst

Note the piece. In this, the thrust comes towards the gauntlet and frees it from pressing on the breast. Once you have secured him with your point, shove him away from you, as you see painted above.

Merkh das stukch dauon kumbt der stich zw dem hantschuech vnd nymbt sich von den dringen zw der prust wenn dw in hast gehefft mit deinem ort So schewb in von dir als dw es obn gemalt siechst

29R (31R)

WRESTLING

Note the piece. When both of you strive to grasp each other and wrestle, and he grasps you with his right hand, then hit his right arm over the elbow with your left hand. Step forward with your right foot to the outside of his right foot, and grasp around his body with your

right arm. Thus you will throw him over your hip, as you see painted above.

Merkch das stukch als sy zw ein and welln greiff en zw ringen ob [er] mit seiner rechten hant nach dir greiffst So stos mit deiner tenckchen hant an seinen rechten arm ob des ellpogen vnd schreyt mit deinem rechten fues für aussershalb seins rechten fues vnd greiff mit deinem rechten arm vmb seinen leib So wirffstu In vber dein huff als dw es oben gemalt sichst

29V (31V)

WRESTLING

Note the piece. If both of you have grasped each other's arms and are pulling strongly, then let your left hand go. Use the hand to hit his right arm behind the elbow to the inside to drive it away from

yourself. Grasp around his back with your right arm, and with your left hand, grasp his right foot below the knee from the outside. Lift up, and thus you will throw him as you see painted above.

Merkch das stukch wenn zwen alnn den andern die arm vest begriffen hatt vnd vast rukn So la aus dein tenke hant vnd stös damit seinen rechtn arm hindern ellpogen einwärts von dir vnd greiff mit deinem rechtn arm vber seinen rukch vnd mit deiner tenken hant von aussen an seinen rechten fües vnder knie vnd heb vber sich So wirff estu In als dw es oben gemalt sichst

30R (32R)

DAGGER

Note the beginning of six pieces with the dagger from which all wrestling techniques of the limbs, all pieces with the dagger, and the

breaks that belong to them are derived. Note whether he has raised his dagger high towards the left side of his shoulder, with his [left] foot forwards.

Merkch den anvankh^{xxvi} Sechs stukch des degn^{xxvii} daraus alle ringen kom[en] der gelidmas daraus kömen alle Stuck die der degn inne hat vnd sei[n] wider pruch die dar auff gehorn Merck ob er seinen degen hett auff g[e] czukcht In d[ie] hoch auff zw der tenkchen seytt en seiner agsl zw vnd sein [?]^{xxvii} füs hett für gesezetz

30V (32V)

DAGGER

Note the second piece.¹⁷ When he thrusts towards your face with his dagger from above, catch his right hand by the wrist in your left hand.

Twist his arm outwards, and thus you have broken his thrust. If you wish to wrestle with him, let go of your dagger and grasp his right elbow from below with your right hand. Pull inwards to your chest, and thus you will break his arm or he must fall.

Merkch das ander stukch ob er dir stech von oben zw dem gesicht mit seinem degn So vach sein rechte hant bey dem glid in dein tenke hant vnd reyd ym seynn arm auswerts So hastu Im den stich geprochen wildw in bringen zw ringen so lass deinen degenn vnd greyff mit deiner rechten hant von vnden auff sein rechten ellpogn vnd rukch eintt werts gen der brust So prichstu Im den arm oder er mües vallenn

31R (33R)

DAGGER

Note one more dagger piece.¹⁸ If he thrusts towards your breast from

above and was so quick that you could not reach your dagger, then grasp his hand behind his dagger with your right hand. Strike your left arm over his right arm and set your left hand on your breast. Draw your right hand strongly towards yourself, and thus you will break his arm or throw him down at your feet as you see painted above.

Merkch mer ain stukch des degenn ob er dir von obn zw der prust stech vnd vber eylt hielt das dw zw deinem degenn nicht hett est mügen komen So vach m[it] deiner rechten hant sein hentt hinder seynn degenn vnd slach deinen tenckhen arm oben vber seinen rechten arm vnd secz dein tenke hant an dein prust vnd drukch dein recht e hantt vast zu dir So prichestu seynn arm oder wirff e[st] In für dein nyder als dw es obn gemalt sichst

Note the third dagger piece. If he thrusts towards your body from below and you could not take hold of your dagger, grasp his wrist behind his dagger from above with your right hand and grasp his elbow from below with your left hand. Lift his arm to your left shoulder, and thus you will break his arm or carry him wherever you wish, as you see painted above.

Merkch das dritt stukch des degenn ob er von vnt n stëch zu dem ganczn leib vnd dw zw deinem degenn nicht kömen wärest So greyff von obn mit deiner rechten hant auff sein glid hindter seins degenn vnd mit deiner tenkn hant von vnt en an seinen ellbogen vnd heb seinen arm auff auff dein tenkn achsell So zepreuchestu syenn arm oder tregst In wo dw In wilt als dw es oben gemalt sichst

Note the fourth piece. If he thrusts at your face from above, then let go of your dagger, and grasp his hand behind his dagger with your left hand. Grasp his blade with your turned right hand, and thus you will take his dagger and lead him wherever you wish, as you see painted above.

Merkch das vyerd stuk ob er dir von oben stech zw dem gesicht So lass deinenn degn vnd vach in dein tenke hannt sein hant hinden degenn vnd greiff mit deiner vercherten rechten hant in sein chlingn So nymbstu ym seynn degenn vnd pringst in zw wew dw wild als dw es oben gemalt sichst

Note the fifth piece. If he thrusts upwards from his right side to your body, then grasp his arm behind the dagger with your left hand, and [grasp] the blade with your right hand. Twist downwards, and thus you will take his dagger, as you see painted above.

Merkh das funfft stukh ob er stech von vnt en auff von seiner rechten seyten en zw deinem leib So greyff mit deiner tencken hant auff seynn arm hindern degenn vnd mit der rechten hant In sein chlingen vnd reydt ündersich So nymbstu ym den degenn als dw es obn gemalt sichst

33R (35R)

DAGGER

Note the sixth piece. If he thrusts at your neck from his left shoulder, then catch his hand behind the dagger with your left hand. Grasp his

blade with your right hand and lift upwards. Thus you will take his dagger. Step to the outside with your left foot, behind his right foot, and strike his breast with your right hand. Thus you will bring him over your leg to fall. You may see the beginning of this painted above.

Merkh das Sechst stuk ob er steh von seiner tenkn agsl zw deinem hals So vach mitt deiner tenken hantt sein hant hindern degenn vnd greiff mitt deiner rechten hantt in sein klingen vnd heb vbersich so nymbstu Im seynn degenn vnd schreitt mit deinem tenkn fues aussenn hinter seinen rechte fues vnd stos mit deiner rechten hantt in sein brust So vellestu In vber dein pain als dw des anefang obn gemalt sichst

Note the seventh piece, one of the five parries.¹⁹ If he thrusts at your face from above, then catch the thrust on your dagger between your hands. When you have parried the thrust, then quickly grasp his right elbow from below with your left hand. With your right foot, step behind his left foot to the outside, and lift his arm up strongly. Thus you will throw him backwards, as you see painted above.

Merck das Sybent stukck der funff versaczung aine ob er dir von oben stech zw dem gesichtt So vach den stich zwischen dein hentt auff deyenn degenn wenn dw ym den stich hast verseczt So greyff resch mit deiner tenken hant von vntt en auff seinen rechten ellbogen vnd schreit mit deinem rechten füß aussn hinder seynen tenken fues vnd heb seinen arm vast vbersich So wirfesstu in vber rukch als dw es obn gemalt siechst

.....

Note the eighth piece. If he thrusts towards your body from below with strength, then drop your dagger, which you hold between your two hands, onto his blade. Thus you will parry his thrust. With your left hand, grasp his wrist behind the dagger, and step to the outside in front of his right foot with your right foot. Grasp his neck on the left side with your right hand, and thus you can throw him down well. You may see the beginning of this painted above.

Merkch das acht stukch ob er dir stech mit krafft von vndn zw deinez leib So vall mit deinem degen
 zwischn bayder deiner hant auff sein chlingen So hastw jm den stich versectzt vnd greiff mit deiner
 tenckn hant auff sein glied hindern degen vnd schreitt mit deinem rechte fues nach aussn für seinen
 rechte fues vnd greiff mit deiner rechten hant an dñe tenckn seytt en seins hals So magstu in wol
 werff enn demyder als dw den ankankch oben gemalt sichst

Note the ninth piece. If he puts his right foot in front, and thrusts towards your breast from his left side, then catch the thrust on the blade between your two hands. With your left hand, grasp his arm behind the elbow, and push strongly away from yourself, so that he turns his back towards you. You may see the beginning of this painted above.

Merkch das Newnt stukch ob er seinen rechten fues hett fur gesezt vnd stech von sein tenkn seytt n zw deiner prust So vach den stich czwischenn bäyd deiner hentt auff dein chlingn vnd greyff nach mit deiner tenkn hant auff seynn arm hindern ellpogenn vnd stoos vast von dir das er dir den rukch kertt als dw es oben den anfangch gemalt sichst

Note the tenth piece. If he thrusts at your face from above, and you were unable to get hold of your dagger, then lay your right hand on the left crosswise, and catch the thrust on your arms. With your left hand, grasp around his wrist behind the dagger, and with your right hand, [grasp] his blade upwards from below. Thus you will take his dagger. You may see the beginning of this painted above.

Merkch das zehentt stukch ob er von oben zu dem gesicht stech vnd zu deinem degen nicht komen werest So leg dein rechte hant auff die tenckhe krewczweys vnd vach den stich auff deinen arm vnd greiff mit deiner tencken hant vmb sein glid hinderwarts degen vnd mit der rechten hant vbersich auff In sein ch[lingen] So nymbstu ymb seyn degen als dw den anevang obn gemalt sichst

Note the eleventh piece. If he thrusts at your breast from below from the right side, and puts his left foot strongly forwards, and you have failed to reach for your dagger, then drop your crossed hands on his dagger from above. With your left hand, grasp his hand behind the dagger from above, and grasp his blade with your right. Press down, and thus you will take his dagger. You may see the beginnings of this painted above.

Merkh das Aindlecht Stuck ob er von vndtn aus der rechten seitten stech zu dein prust vnd seinen tencken fües hatt fürgesaczt nach stach vnd dw deins degenn [ver]samnt wärest So vall aber mit deinen hentten en krewczweis von obn auff seinen [d]egn vnd greiff mit deiner tencken hantten oben auff sein hantt hindeen degenn [v]nd greiff mit deiner rechten hant in sein kchlingn vnd druck vndersich

36R (39R)

DAGGER

.....

Note the fourteenth piece. If he thrusts downwards at you from above with all of his strength, then parry against his thrust from your right side. Afterwards, hit his right elbow with your left hand so that he turns his back to you. Drive the dagger through his two legs from behind, pull him to you, and grasp the back of his neck with your left hand. Thus you will throw him down in front of yourself, as you see painted above.

von deiner rechten seytn mit versaczunge seins stichs dar na[ch] stös mit deiner tenkn hant seinen rechten elpogen das er dir kertt seinen rukch vnd var durch mit deinem degenn von vndn hinden durch sein bayde pain ruk[ch] an dich vnd grejff mit deiner tenkn hant hindn auff sejnn hals So wirff estu In vor dein nyder als dw es obn gemalt sichst

DAGGER

Note the thirty-first piece. If both have grasped each other in the same way, and each has brought his right arm under the left armpit of the other, and one has strongly swung the other one, and you have then brought him to your left side for the throw, then step forwards to the outside of his right leg. Swing strongly onwards with your right arm, and thus you will throw him downwards, as you see painted above.

Nach das Ain vnd der ander Stuckh ob sy bed gleich ainer den andren hett gevassett vnd yeder seinen rechten arm vnder sein tenke vgsenn pracht vnd ainer den andren hertt ichleich Swung wenn

*dw in hast pracht in den Swung deiner tenken seytt enn So tritt für aussenhalb seins rechten pain
aussen für sein rechts pain vnd swing mit deinem rechten arm vast nach So wirff estu In nyder auf
den rukch als dw es obn gemalt sichst*

39R (49R)

DAGGER

.....

Note the thirty-fourth piece of wrestling, which comes from the break of the change. When he puts his right arm on your neck, and strives to grab your leg above your knee with his left hand to throw you backwards, then catch his hand behind his dagger with your right hand and strike it into his groin. Step with your right foot so that you come behind his back. With your left hand, grab through his two legs from behind, and grasp his wrist behind the dagger. Then let your right hand go, and grasp him over the breast with it from the outside. Thus you will throw him, as you see painted above.

Merkh das vyervnddreÿssigst^{xxxix} Stuck des ringen kumbt er aus dem pruch der wechsl ob er dir hett geseetzt sein rechtn arm an deinen hals vnd hett welln greyff enn mit seiner tenkn hant nach deinem pain ob deins knydes vnd wolt dich werff enn vber rukch So vach mit deiner tenkn^{xxxix} hant sein hant hindern degen vnd slach Ims in sein schos vnd schreyt mit deinem rechtn fues das dw Im kumbst hinder seinen rukch greyff mit deiner tenkn hant von hindn durch pede seine pain in sein glid hindern degen So la vach dein rechte hant vnd greyf damit von aussen vber sein] prust So wirff estu In als dw es oben gemalt sichst

39V (49V)

DAGGER

Note the thirty-fifth piece. If he has put his left foot forward, and thrusts towards your face from his right shoulder from above, then catch his right arm behind the elbow with your right hand. Strike his left shoulder, and grasp above his right arm with your left. Push strongly downwards, and thus you will break his arm or throw him down, as you see painted above.

Merkch das funnff vnddreyssigst Stuck ob er hett seinen tenkn fües für gesezt vnd stech von obn nyder zw deinem gesicht von seiner rechtn agsell So vach mit deiner rechtn hant seinen rechten arm hindern der ellpogn vnd slach ym auff sein tenks agsell vnd greyff mit deinem tenken arm obn vber seinen rechtn vnd druckch vast nyder So brichst ym den arm oder wirfst nyder als dws obn gemalet sichst

40R (50R)

DAGGER

Note the thirty-sixth [piece]. If he puts his right foot forward, and thrusts downwards at you with all of his strength from above, and strives to rush in at you, so that you can't reach for your weapons, then throw your left arm over his right arm and pull so that you bring it under your left armpit. Step in front of his left foot to the outside

with your left foot, and pull towards yourself. Thus you will throw him, as you see painted above.

Merkch das Sechs vnddreyssigst ob er seinen rēchkn fues hett für gesezt vnd s[tech?].xxxiii von seiner ganczn krafft von oben nyder auff dich vnd dich wolt vber eylln das dw zw deiner wer nicht wērst kömen So slach von obn nyder mit deinem tenkn armn uber seinen rechtn arm vnd rukchen das dw In pringst vnder deine tenk[?] ügsen vnd schreit mit deinem tenken fües aussn fur seinen tenkn fus vnd ru[kch] gegen dir So wirff estu In aks dws obn gemalt sichst

40V (50V)

DAGGER

Note the [piece]. If he thrusts upwards at you from below from his right side, and he has put his left foot forwards, then step inside his feet with your left foot and drop your left hand onto his right hand.

Grab his blade with your right hand, and twist the point upwards towards his breast. Thus you will push his dagger into him, as you see painted above.

This is the thirty-seventh piece with the dagger.

Merkh das^{xxxiv} ob er von vndn auff stech von seine rechten seytt en vnd seinen tenkn fües hett für saczt So schreyt mit deinem tenkn fües Innerhalb seins fües vnd vall mit deiner tenkn hant auff sein rechte hant vnd greyff mit deiner rechten hant auff sein chling vnd reyð vbersich auff dein^{xxxv} ort In sein prust So druckst dw seinen degen in In als dw es obn gemalt sichst

Das ist das xxxvij stukch des degens

41R (52r)

HOLDING DOWN

Note the third holding piece. When you have begun to wrestle with

him, and you grasp him with your left arm in front around his neck, then drop downwards on your left knee, pull him downwards towards yourself on his back, and work²² with your dagger, as you see painted above.

Merkch das dritt ^{xxvi} Stuck des **halten** wenn du mit Im zw ringn bist komen vnd hast Im griff en mit deinem tenkn arm voren vmb seinen hals So vall nyder auff dein tenkchs knye vnd rukch In zw dir dar nyder auff seinen rukn vnd aribait mit deinem degen als dw es l [!] oben gemalt siechst

41V (52V)

HOLDING DOWN

Note the fourth holding piece. If you have again brought him to his back with wrestling, then drop with your right knee between his legs, and push his right arm down near the shoulder with your left elbow.

Lift his visor up at the bevor²³ with the same hand, and work with your dagger, as you see painted above.

Merkch das vyerd Stuckch des halten wie dw Im aber mit ringen bracht hast auff seinen ruck So vall mit deinem rechten knie zwischen sein pain vnd mit deinem tenkn ellpogn durch^{xxxvii} nyder seinen rechten arm bey der achsell vnd heb in mit der hant pey dem partt das visyer vbersich vnd aribait mit deinem degen Als dw es oben gemalt sichst

42R (53R)

HOLDING DOWN

Note the fifth holding piece. If it so happens that you have again thrown him on his back, then drop downwards on your left knee to the outside of his left leg. If he pulls his foot towards himself, and strives to support himself in standing up, then go under his left knee-

bend from the outside with your left hand. Grab his right hand by the wrist, hold it tight and work with your dagger, as you see painted above.

Merkch das funfft Stuck des halten wie das aber chömen ist das dw In auff seynn rukch geworff en hast So vall nyder auff dein tenks knye ausserhalb seins tenkn pain ob er seynn fües zw Im czug vnd wolt sich stewart zw dem aufsteeen So var ym von aussen mit deiner tenken hant durch sein tenke knyepug vnd greyff sein recht e hant bey dem glid halt die vest vnd aribait mit deinem degen als dw es obn gemalt sichst

42V (53V)

HOLDING DOWN

Note the sixth holding piece. If it so happens that you have thrown him on his belly during wrestling, then drop downwards with your

right knee next to his right leg, and your left knee on his loin. If he lifts himself on both his arms, and thus strives to stand up, then hit his right arm under his breast with your right hand, grasp his left hand by the wrist with your left hand, turn it behind his back, and hold tight. Draw your dagger, and work, as you see painted above.

Merkch das Sechst stukch des haltn wie das dar kömen ist das dw Im mit Ringen auff seinen pauch geworff en hast So vall mit deinem rechten knye neben seins rechtn pain nyder vall mit deinem tenkn knye auff sein lent ob er sich auff baid sein arm gestewrt hatt vnd wolt vnder dem auff sten So slach in mit deiner rechtn hant seinen rechtn arm vnder sein prust vnd greyff mit deiner tenken hant nach seiner tenkn hant bey dem glid vnd dreÿ Ims hinder sein rukch vnd halt vest zukch aus deinn degn vnd aribait damit als dw es oben gemalt sichst

Note the seventh holding piece. If it so happens that you brought him to his back during wrestling, then fall with your right knee between his both legs. Take his left hand into your left hand, and pull it under his head. Hold it tight, and work at his face, as you see painted above.

Merkch das Sybent Stuckh des halten wie das mit ringen aber darzw kûmen ist das dw in auff sein ruken bracht hast So vall mit deinem rechtn knÿe zwischn bayd seiner pain^{xxxviii} So nymb sein tenke hant in dein tenke hant vnd zuch Ims vnder sein haubt vnd halt vest vnd aribait zw seinem gesicht als dw es obn gemalt sichst

-
- 1 Piece = technique, set of movements.
 - 2 “Striking away” in this sense means defending forcefully.
 - 3 Meaning to beat or attack someone.
 - 4 “Armoured hand” means that only the right hand holds the grip of the sword. The left hand grasps the blade in the middle to put more force and accuracy into the thrust. The hand is “armoured” since these techniques are usually performed in harness, thus the hand is encased in an armoured gauntlet, though in some illustrated fencing books, as in the present one, these gauntlets are not depicted. There are very few exceptions, see fol. 27r and 28v, as well as note xxiv. The reason for this is unclear.
 - 5 Meaning to pressure or attack someone.

6 In this case rushing at someone means quickly seeking body contact with the opponent to conquer him with wrestling techniques.

7 A shield with an indentation for the lance, what is referred to as a *bouche*.

8 The sword itself is not short; only the way of holding it is shortened. It is the same as holding it in the armoured hand (see note 3). This is also called halfsword in other manuscripts.

9 The (wooden) barrier that marks the boundary of the fighting area, for example in an ordeal or judicial duel.

10 Turning (also known as “winding”) usually means a turning motion of the sword executed while maintaining contact with the opponent’s blade.

11 A singular name that does not occur in any other fencing manuscript. The meaning is not entirely clear. One way of reading may be that we have two consecutive techniques: in the first, the first joint, the wrist, is attacked; in the second, it’s the next joint, the elbow.

12 A strike with the pommel. See glossary, p. 279.

13 A counter against a piece.

14 Further attacks and pieces, see note 5.

15 A situation in which both opponents have set their points onto the adversary’s chest, occasionally also referred to as “gedreng”.

16 See note 14.

17 In the versions from both Cracow and Vienna, this is the first dagger technique.

18 This dagger technique is not numbered in the text. Consecutive numbering begins again only with the next, the third piece.

19 A defending and blocking action.

20 In fact, the illustration shows the left foot on the *inside*, which makes the throw much more difficult to perform. *Gladiatoria* Cracow is mostly identical. However, the position of the feet in the Vienna version is not so clear, and the foot could indeed be placed on the outside.

21 A technique described in the preceding piece, which is missing here.

22 That is, attacking, seeking and exploiting the openings. See note 14.

23 A *bevor* is usually a stand-alone piece of armour that was worn in combination with the type of helmet known as a *sallet*. It was a chin protection, attached to the armour by the means of staples, pins, and leather straps. Quite often, the *sallet* was worn entirely

without a bevor. Calling the chin protection of a closed visored helmet a bevor is rather unusual.

..... ➔
i The manuscript starts with the fourth piece; the first three are missing.

ii Here, “wenn du” is missing not only in this in the manuscript, but also in the Vienna Version (Vienna, Kunsthistorisches Museum, KK 5013, subsequently Gladiatoria Vienna). Completed according to Cracow, Biblioteka Jagiellońska, Ms. Germ. Quart. 16 (subsequently Gladiatoria Cracow).

iii Recte: “stich” (see Gladiatoria Cracow and Vienna).

iv The text portion of this page has been cut off beneath the feet of both fighters. Completed according to Gladiatoria Vienna.

v The text portion of this page has been cut off beneath the feet of both fighters. Completed according to Gladiatoria Vienna.

vi The text portion of this page has been cut off beneath the feet of both fighters. Completed according to Gladiatoria Vienna.

vii The text portion of this page has been cut off beneath the feet of both fighters. Completed according to Gladiatoria Vienna.

viii The word is underlined in pencil.

ix Word illegible; completed according to Gladiatoria Vienna.

x The text is underlined in pencil.

xi The text portion of this page has been cut off beneath the feet of both fighters. Completed according to Gladiatoria Vienna.

xii The text portion of this page has been cut off beneath the feet of both fighters. Completed according to Gladiatoria Vienna.

xiii Illegible deletion.

xiv The word “tencken” is missing here. (See Gladiatoria Vienna and Cracow.)

xv “dein” in Gladiatoria Cracow. In Gladiatoria Vienna it also says “sein”.

xvi “innerhalb” in Gladiatoria Cracow.

xvii Curiously this is the description of a break against a piece which is written underneath the same image in both Gladiatoria Cracow and Vienna (completed according to the Vienna version):
“Merkch daz stuck ob du In hast bracht von aller seiner wer von dem Spieß tarzschen Swert vnd degen So ker fur deinen knopf des Swertz vnd slag mit ganczer sterck vff In wo du In weist am herttisten ze treffen da mit daz du In mogst pringen zu der erden”
(Note the piece. When you have taken all of his weapons—

spear, ecranche, sword and dagger, then turn the pommel of your sword forward and strike him with all of your strength where you think you can hit him most forcefully. With this, you may take him to the ground.)

xxviii The rest of the line vanishes in the cut-off area.

xxix Due to the clipping parts of the text are illegible. Completed according to Gladiatoria Vienna.

xxx Some words are illegible because of the clipping. Completed according to Gladiatoria Vienna.

xxxi “nyder” in Gladiatoria Vienna.

xxxii A passage is missing here, completed according to Gladiatoria Vienna: “an das glid seiner tenken hant”.

xxxiii While Gladiatoria Vienna has the same text, the one in Gladiatoria Cracow is completely different.

xxxiv Interestingly, this is one of only two images showing fighters with gauntlets. In the present manuscript, the chronological order is mixed up since the second action with gauntlets, which is on fol. 28v, is situated before this one in both Gladiatoria Cracow and Vienna; this is also in line with the actual sequence of the technique.

xxv Recte “ymb”, s. a. Gladiatoria Cracow and Vienna.

xxvi “anvankch” and “degn” have been underlined in pencil by a later hand.

xxvii Since this image appears only in Gladiatoria Vienna—unfortunately without text—but not in the version from Cracow, a completion cannot be provided here. The illustration, however, suggests the left foot.

xxviii Pieces 12 and 13 are missing.

xxix Recte “pain”, see Gladiatoria Cracow and Vienna.

xxx Pieces 18 to 29 are missing.

xxxi Pieces 32 and 33 are missing.

xxxii “rechten” (= right) according to Gladiatoria Cracow and Vienna, which is also much more in line with the flow of the piece.

xxxiii Gladiatoria Cracow does not contain this piece at all, and the Vienna version presents the illustration, but not the text. Completions following other manuscripts must therefore be omitted.

xxxiv The word “stuck” is missing here (see Gladiatoria Vienna).

xxxv “den” (= the), instead of “dein” (= your), according to Gladiatoria Cracow and Vienna, which would be more in line with the flow of the piece anyway.

xxxvi Pieces one and two are missing.

xxxvii Recte: “drukch”, as in Gladiatoria Cracow and Vienna.

[xxxviii](#) *The Cracow version offers some more detail here:*

*“vnd greÿff mit deinem rechten fueß v̄ber seinen tencken rist so
helst du In den fueß daz er daz pain nicht mag an sich gezihen”.*

*(Go with your right foot over his left instep. Thus you secure
his foot so that he cannot pull the leg towards himself.)*

A LONG TIME AGO ...

A LONG TIME AGO IN A LIBRARY FAR, FAR AWAY ...

The Adventures of the *Gladiatoria* Manuscript from New Haven

I. THE DESCRIPTION

How nice it is when something you believed to be irretrievably lost finally reappears: the missing little red toy car, the untraceable wedding ring, the runaway pet—or the medieval fencing manuscript.

Quite frequently, these missing items are not really lost at all, but only misplaced somewhere else. And this is exactly what happened to the manuscript we will discuss here.

Codex MS U860.F46 1450 from the Yale Center for British Art (YCBA) in New Haven, Connecticut, has had a rather exciting and trying time, upon which we will now attempt to shed some light. It is a Fechtbuch—a book that deals with fighting techniques—that was originally only one part of a larger entity, *Codex Gothanus Membr. II 109* from the Herzogliche Bibliothek in Gotha in Germany, which disappeared from the library during or shortly after World War II. We will only deal extensively with this first part, the one containing the Fechtbuch, and will begin by describing it. The fate of the original, entire manuscript will be briefly outlined later on.

Everything concerning our manuscript is ambiguous, even difficult. As such, we will encounter uncertainties and oddities time and again over the course of this brief essay. Even the format exemplifies this characteristic.

Format

In the original shelf mark from Gotha—*Membr. II 109*—the Roman numeral “II” signifies a quarto book format.

The manuscript was measured at least five times in the past, each time with certain differences:

- In the first known description of the manuscript, Friedrich Jacobs and Friedrich August Ukert¹ came to a result of $6 \times 6\frac{1}{4}$ French inches, which corresponds to 163×169 mm (or 6.42×6.65 in)—according to the conversion carried out by Hans-Peter Hils,²
- Walter Benary³ measures 163×175 mm (6.42×6.89 in) in 1912,
- Cornelia Hopf⁴ stated 16.5×17.5 cm (6.50×6.89 in) in 1997,
- the catalogue of the German illustrated manuscripts from the Middle Ages⁵ from 2009 mentioned a size of 165×180 mm (6.50×7.09 in),
- and finally, the YCBA stated a format of about 19×20 cm (7.48×7.87 in) in 2012.

After a request from the author in August 2012, Francis Lapka, catalogue librarian of the YCBA, checked the measurements and determined a size of 172×185 mm (6.77×7.28 in) for the cover; the pages of the body of the book are consistently 165×178 mm (6.50×7.01 in)—apart from three leaves with their text cut off. These dimensions vary by less than one millimetre in total.⁶

The current format, however, is by no means the original one, since passages of the text have frequently been cropped at the outer and lower margins. The *Gladiatoria* manuscript from Vienna⁷ is extraordinarily similar to this one in several aspects, including in size and proportions. A direct comparison with the illustrations and texts of the Vienna manuscript—its size is listed as 185×195 mm (7.28×7.68 in)⁸—suggests that the New Haven manuscript was originally about one centimetre (or a little less than half an inch) higher and wider. It cannot be ascertained for sure when it was cropped, but Jacobs and Ukert had already mentioned damages.⁹

Cover

The cover consists of auburn leather. Five punched diagonals intersect

each other on both the front and the back cover, thus forming rhombic fields. Two rows of three fields one above the other are shaped thus, and in each field, a narrow rhombus that is bordered by an outline carries a raised griffin rampant on a punched ground. Six more fields bear embossed flower heads in a circle: two smaller ones on top of another occupy the left and right side respectively, with two larger ones in the middle.

The spine is divided by four double raised bands. Between the second and the third, we find the golden embossed inscription “ARS PALAESTRA” (art of wrestling), beneath the fourth “XV s.” (= the 15th century).

On the inside of the front cover, there is an oval ruby-coloured sticker with a central gold wheatsheaf and the words “Oak Spring” and “Paul Mellon” in golden letters running around it.

An insert has been glued to the inside of the back cover. It bears the YCBA logo and has the accession number written in pencil below: U860.F46 1450. The lower margin of the inside of the cover carries the embossed name of the bookbinder: S. (= Sven) Wiklander.

Content

According to the information provided by the YCBA, the binding of the codex is neat. The manuscript begins with five empty leaves made of heavy paper resembling parchment; at the back, there is another such leaf. These leaves were inserted during the most recent binding in the 1960s.

The actual codex consists of 43 parchment leaves. The fashion of the binding is difficult to recognize without manhandling the manuscript too roughly. It appears, however, that some leaves are mounted on stubs, others by contrast are not. Unfortunately, the YCBA was unable to determine unequivocally whether the entire manuscript was bound together from single leaves. According to Francis Lapka “others appear to have conjugate leaves”.¹⁰

All leaves are generally in a good condition, save for leaf number 7, which is much grubbier than the rest, and quite dilapidated.

Folios 1r–43r feature water coloured pen drawings in black ink over pencil sketches with two fighting persons in harness on each page. The pictures occupy the entire width and approximately the upper three-quarters of the page.

A pencil sketch is particularly identifiable at the right leg of the right fencer on f. 17v. This sketch corresponds to the stance found in the *Gladiatoria* manuscript from Vienna, f. 22v; the finished drawing, however, matches the version from Cracow,¹¹ f. 24v.

Beneath a separating line, three to eight lines of explanatory text are written in a blackletter script, called *bastarda*, with brown ink. Occasionally the text runs around the fighters' feet which overlap the separating line. This suggests that the drawings were outlined first with the text being filled in later in a next step. On some leaves, however, the text has been cut off beneath the fighting pairs, specifically on ff. 3, 4, and 7.

Only one scribe was involved in the execution of the manuscript, and he was also responsible for the majority of the Vienna *Gladiatoria* manuscript, revealed by close comparison of the two examples of handwriting (ff. 1r–10v,¹² 12r–27v, and 29r–56v). Occasionally, even the alignment of the single lines is identical in both manuscripts.

The dialect is Austro-Bavarian.¹³

Folio 43v features several Spanish names, written in pencil, possibly in the 17th century: Don Diego de Coes (twice), Juan Perez del Gurca, Jusepe Cerdeño.¹⁴ Almost all pages carry at least one numbering. However, these are inconsistent and incomplete:

- Fencing techniques, numbered consecutively in the text
 - in spear fighting (ff. 1r–5r, whereby the text is missing on leaves 3 and 4)
 - in dagger fighting (ff. 30r–40r)
 - in holding down techniques¹⁵ (ff. 41r–43v)
- Possibly contemporary leaf numbering in ink
 - leaves 9–18
 - leaves 28–32
 - leaves 39–43
- Possibly contemporary leaf number in ink (ff. 25r and 37r)
- Possibly contemporary page numbering in ink (ff. 30r–37v)
- Page numbering in ink, probably from a later era (ff. 1r–6v)
- Page or leaf number in ink from a later (?) era (f. 7r)
- Modern in pencil (all pages except leaves 11, 18, 22, and 26)
- Modern pencil number 2, in a circle, on f. 22r

Since the current order of leaves got a bit mixed up—particularly in the middle part—these numberings may help us to reconstruct the initial configuration. More on this a little later.

Every page of the *Fechtbuch* shows two fighters in full armour¹⁶ who fight against each other in a variety of disciplines:

1r–5r: Spear

5v–19v: Sword

20r–22r: Wrestling

22v–28v: Sword

29r–29v: Wrestling

30r–40v: Dagger

41r–43r: Holding down

Wrestling, however, is not listed as an independent discipline, especially when we use the Cracow codex as a reference for comparison. In that volume, we find 50 consecutively numbered techniques for the sword between spear and dagger combat, and the wrestling techniques are included in these.

The suits of armour are depicted in minute detail, with coloured doublets or coats of arms appearing frequently. These are most often painted in blue, red, purple, orange, and green. All fighters wear closed helmets with visors that are illustrated quite uniformly; the amount of detail of the armour, on the other hand, varies considerably.

The weapons are drawn in a rather similar fashion as well, but the ecranches, the little shields, which mostly lie on the ground, are rendered a bit oddly: the bouche, the indentation for the spear or the lance,¹⁷ is usually situated—in heraldic terms—on the right hand side of the shield. On folios 3r, 9v, 11r, 20r, 25r, 29r, and 41v, however, we find ecranches with a left sided orientation lying beneath or next to each of the left fighters; the same is true for the right fighters on folios 19v and 42r; the right one on fol. 4r is holding one of these in his hand; fol. 17r even portrays two wrongly arranged ecranches on the ground; and several ecranches seem to be devoid of any strap or grip at all: folios 9r, 14v, 15r, 15v, 16r, 16v, 17v, 18v, 19r, 20v, 21r, 23r, 23v, 26r, 26v, 27v, 28r, 28v, 31r, 31v, 34r, 36r, and 36v. With only a few exceptions, each ecranche displays a red St. George's cross on a white background.

Although the suits of armour vary considerably in detail, the overall style of the drawings appears homogeneous throughout, so that it is quite likely that only a single illustrator was responsible for the creation of the manuscript. In contrast to the Vienna *Gladiatoria* codex mentioned before, the pictures all share a similar high level of quality.

Based on the particularities of the writing, the dialect, the arms, and the armour, the manuscript can be dated to about 1430.

Original Composition

Before the entire manuscript disappeared from Gotha, it consisted of three parts. The first one is the manuscript we deal with in this article; the second one is the fragment of a Spanish comedy, penned by Lope de Vega (1562–1635): *El testimonio vengado*; the third one remains lost without a trace to this day, and it contained several Spanish poems with later additions of French and Latin sentences on some leaves.¹⁸

That means that the original composition was as follows:

56 leaves of parchment:

1–43: *Gladiatoria Fechtbuch*

44: empty recto page, a pen sketch on the back

45–55: Lope de Vega: *El testimonio vengado*

56: title and listing of names

44 leaves of paper: Spanish poems, French and Latin texts

Regarding the correct number of pages, as for the question of format, a certain disagreement in the specialist literature prevails: Sometimes the number of parchment leaves is stated as 55, sometimes as 56. Quite probably, this inconsistency can be traced back to a mistake in counting the leaves that must have occurred even before the very first description of the manuscript written by Jacobs and Ukert. These two gentlemen account for 55 leaves, in which both Martin Wierschin¹⁹ and Hans-Peter Hils²⁰ follow them. The latter first repeats Martin Wierschin's statement in *Meister Johann Liechtenauers Kunst des langen Schwertes*, but later on, in his essay from 1987 about three *Gladiatoria* manuscripts, he refers to the description of the manuscript by Rudolf Ehwald, director of the library in Gotha from 1893 until 1921, who counted 56 parchment leaves.²¹ The *Katalog der deutschsprachigen illustrierten Handschriften des Mittelalters* contains an internal discrepancy, since on one occasion it states 55, on another 56 leaves. Nevertheless, it points to a newer pagination only on the recto pages: 87–111. Cornelia Hopf lists 56 pages. The confusion can be explained quickly: Walter Benary²² tells us in a footnote that page 101 (which corresponds to fol. 55) has been counted twice.

Benary reproduces the text of the fragment of the comedy in accordance with the original page numbers, namely from page 89 (fol. 45) to page 109 (fol. 55). In some additional remarks concerning the last part of the fragment he writes that fol. 55v (the verso page of the last leaf of our fragment) carries the name Pedro de l'Gurça; on fol. 56v there are some pen scribbles and the name Pedro dee Gnça (sic) in capital letters. Additionally, we find the title of the comedy on fol. 56r.²³

The remaining leaf that belongs between the *Fechtbuch* and the fragment is blank on the recto page, and on fol. 44v (see [plate 15](#)) shows a rough pen sketch of a fighter in harness that is left uncoloured. The assumption that this drawing was executed by the writer of the comedy in the 17th century, using an illustration from the *Fechtbuch* as a template,²⁴ can certainly be excluded since neither the style of the depicted harness nor the combination of weapons—sword and dagger—appear in our manuscript in this manner.

II. LOCATIONS

Unfortunately, we cannot continuously verify the provenance of the manuscript; however, we can identify a number of locations that provide reliable indications regarding where it has been held.

Bavarian-Speaking Region

The manuscript came into being in the beginning of the 15th century, probably in the area of what today is Bavaria or Austria. It was presumably created in a larger studio or workshop, but only one scribe and one illustrator were involved.

Gotha

We can only trace back the history of the manuscript with certainty to

the 18th century: Hereditary Prince August of Saxe-Gotha-Altenburg presented the volume to the Herzogliche Bibliothek Gotha (the ducal library) as a gift on October 22, 1792.

At this time, the manuscript *Membr. II 109* consisted of the aforementioned three parts. During or shortly after World War II, however, it disappeared from the library, only to resurface some time later and in separate parts:

The fragment of Lope de Vega's comedy was restored to the library in Gotha in 1997. This part had found its way into the possession of the antiquarian and auction house Hauswedell & Nolte in Hamburg, which handed it over to the Staats- und Universitätsbibliothek Hamburg (state and university library) in 1953 due to the unclear property situation. After an extensive examination, it was given back to the Forschungs- und Landesbibliothek Gotha.²⁵

The third part remains lost to this day.

However, the first part, our *Fechtbuch*, reappeared in Heidelberg a couple of years after the end of the war.

Heidelberg

The Buch- und Kunstantiquariat Dr. Helmut Tenner (book and art antiquarian) sold parts of the manuscript at several auctions in the 1950s and 60s. As far as we can determine, 19 individual leaves (out of 43) were sold at auction:²⁶

Auction 5 on November 8/9, 1956: 3 leaves

Auction 7 on June 4/5, 1957: 4 leaves

Auction 9 on February 6–8, 1958: 4 leaves

Auction 11 on October 8/9, 1958: 6 leaves

Auction 37 on October 23/24, 1963: 1 leaf

Auction 43 on November 11/12, 1964: 1 leaf

Each auction catalogue depicts a manuscript page in a rough dot matrix print. We can definitely identify the images that are attached to Hans-Peter Hils' essay²⁷ as the ones stemming from the New Haven codex. Page and plate numbers in the corresponding auction catalogues are juxtaposed with the folio numbers of our manuscript in this table:

A5 (p. 4, no. 3): 28r

A7 (p. 5, no. 2): 34r

A9 (p. 3, no. 3): 9r

A11 (p. 2, no. 10 and [plate 1](#)): 30r

A37 (p. 5, no. 2): 22v

A43 (p. 5, no. 2 and [plate 1](#)): 18r

After this point, the line of descent is broken, and the fate of the remaining 24 leaves remains unresolved.

In fact, all of the sections that had been auctioned off at Tenner's—but obviously not only these—found their way to Sweden.

Stockholm

AB Sandbergs Bokhandel in Stockholm sold the leaves that had been purchased at auction to the United States.

Paul Mellon

Paul Mellon (1907–99) was an American businessman, philanthropist and patron of the arts. He studied at Yale University in New Haven, Connecticut, and was co-heir to a phenomenal fortune, that of the Mellon Bank, which was founded by his grandfather, father and uncle. He facilitated the foundation of the YCBA and made a vast number of charitable donations. Over the years, he purchased the entire *Gladiatoria Fechtbuch*:

1959: 28 leaves

February 1960: 11 leaves

December 1962: 2 leaves

December 1963: 1 leaf

December 1964: 1 leaf

Subsequently, the manuscript was put into the current order and re-bound by bookbinder Sven Wiklander.

New Haven, Connecticut

Paul Mellon bequeathed his collection, including our *Fechtbuch*, to the Rare Book and Manuscript Library (Paul Mellon Bequest) of the Yale Center for British Art, where it has resided since the time of his death.

III. THE EVIDENCE

In his 1985 general survey of German fencing manuscripts,²⁸ Hans-Peter Hils still lists the codex from Gotha and the so-called *manuscript T* as two distinct volumes (catalogue nos. 21 and 23). But in 1987, he re-examined the descriptions of the manuscript and the catalogues of the Tenner auction house, and through a masterly investigative and deductive process, he came to the conclusion that these two were in fact one and the same book.²⁹

In 2009, by using the various descriptions of the volume, I was finally able to identify the New Haven codex, which had become generally accessible in the meantime, as the manuscript that was believed to be lost.³⁰

The criteria by which the codex that was presumed lost can be considered as rediscovered are these:

- The description of the manuscript and the text excerpt by Jacobs and Ukert.
- The description by Rudolf Ehwald.
- The documented list of some Spanish names on folio 43v.
- The plates in the auction catalogues.

1. Description by Jacobs and Ukert

Friedrich Jacobs and Friedrich August Ukert gave an account of a brief text passage in their description of the manuscript on page 9 (which corresponds to fol. 5r): “wenn du rasch den anderen packen willst, so nymb deinen speer und swert zw samb an den arm und schrawff ab den knoph von deinem swert und wirff heriklachen in in und lauff nach dem wurff mit ym ein und nutz swert oder spydes, welches dir eben sey. [...] ob er also auf dich würff mit dem knoph, so nym dein

taschen (Tartsche. Schild) für dich und vach darauff den Wurff und nym din spyes für dich in die recht hant zu dem stich und hüt dich sein dass er dir nicht inlauff, als er in synne hat.”

The transcription we offer in this book differs only slightly: “ob dw wildt reschleich mit ym entten So nymb deinen spyes vnd swert zw samb an den arm vnd schrawff ab den knöph von deinem swertt vnd wirff hertikchleichen in in vnd lauff nach dem würff mit ym ein vnd nütz swert oder spyes welichs dir eben sey ob er also auff dich wurff mit dem knopph So nym dein taschn für dich vnd vach darauff den wurff vnd nym den spyes für dich in die recht hant zw dem stich vnd rett dich sein das er dir nicht in lauff als er yndem synne hatt.”

Additionally, Jacobs and Ukert provide some details about certain pages that correspond to our manuscript: “From page 13 onwards combat goes on with the sword, from page 59 onwards with the dagger. On page 81 start depictions of how to hold the overthrown adversary.” The last two statements are accurate; the first one, however, is not. Page 13 corresponds to folio 7; sword fighting, though, already begins on fol. 5v. Nevertheless, this very page is marked with a number “13” written in ink, which does not relate to the actual page number, allowing us easily to explain this discrepancy.

2. Description by Ehwald

Rudolf Ehwald also provides us with several page and leaf numberings in his description of the codex, most of which closely approximate to those from the New Haven manuscript. Minor differences result in part from the new rebinding, in the process of which the original order was not entirely maintained: “On pages 3, 4, 8 the text beneath the picture is cut off. 2 leaves are missing in the beginning (= title and three pages with pictures), 1 leaf between 35 and 36, 6 leaves between 37 and 38, 1 leaf between 38 and 39, at least 1 leaf before 41. Leaves 1–6 are marked on the individual pages from a more recent hand on each page with 4–15, leaf 7 is unmarked, leaf 8 with the signature 16, 9–14 with later signatures 11–16; 15–17 unmarked; 18–23 have page numbers 22/25, 37=26, 39/43=31/36; in addition, however, leaves 30/37 possess the page numbers 1–12 [...], 15–18. Leaves 1, 2 describe the 4th to 7th, leaf 5r the 12th technique of spear fighting; leaves 30/35 eleven subsequent figures of dagger fighting; leaves 36, 37 the 14th/17th, leaf 38 the 30th/31st, leaves 39/40 the

34th/37th figures of the same fight; from the last series only pictures 3/7 have survived. Leaf 43 only has a picture on the front.”

Unfortunately, there are several difficulties with the above. On the one hand Rudolf Ehwald states that leaves 15 to 17 are unmarked. But this isn't so, at least not in the current order. In the reconstructed version which I present in table II (p. 239) in the appendix, there are even more unmarked pages. As such, this statement must remain in doubt.

On the other hand, he writes that the leaves 18–23 show the leaf numbers 22–25 (although not continuously). Yet these numbers are on leaves 29–32 and show the last of the wrestling techniques and the beginning of the dagger section. Elsewhere, Ehwald indicates eleven consecutive dagger techniques for leaves 30–35, which indeed corresponds to the facts. Unfortunately, this contradiction is also impossible to resolve.

Furthermore, he seems to have simply miscalculated when enumerating the “last series” of the holding down techniques, since the manuscript features five techniques out of seven, not three.

3. Spanish Names

Jacobs and Ukert wrote: “On the back of the last leaf a more recent hand has written down several names: Don Diego de Coes, Juan Perez del Gurca”; and Walter Benary said: “Various names are inscribed in the volume, which read as follows: fol. 43v (the verso of the last leaf of the *Fechtbuch*): Don Diego de Coes (twice). Juan Perez del Gurca. Jusepe Cerdeño.” These are exactly the names we can find on fol. 43v of our *Fechtbuch* – although the Spanish researcher Manuel Valle Ortiz offers a somewhat different reading of the first two names: Sr Don Diego de Cea and Juan Perez de Quirça.

4. Plates

As already outlined above, the plates from the catalogues of the Tenner auction house clearly correspond to those from the New Haven manuscript, thus forming our most striking evidence.

Consequently, Hans-Peter Hils was able to prove as a first step that the codex from Gotha and the *manuscript* ‘T’ are one and the same book; and then, in a second step, I succeeded in verifying that this very manuscript is identical to that one from New Haven and therefore can no longer be considered lost at all.

IV. The Structure

Over the course of its history, the manuscript has been taken apart and rebound repeatedly. The current binding is incoherent and doesn’t always follow a consistent order. Nevertheless, bookbinder Sven Wiklander has recognisably made great efforts to bring the pages into a logical and comprehensible order based on the above-mentioned diverse numberings. However, he did not succeed in every aspect, as we can see on folios 27r and 28v: As these two pages depict the sequence of a technique with the plate gauntlet, they clearly belong together, but are separated here. For a direct comparison, we can turn to the same sequence in the codex from Cracow on folios 26v and 27r, or 24v and 25r respectively in the Vienna version. Both codices preserve the correct order of the technique.

I have already indicated above the different numberings that occur throughout the manuscript. Subsequently, I will strive to use these and a number of additional descriptions and hints as a means to reconstruct the order the pages were in when the volume still resided in Gotha. I also attempt to reconstruct its original form—if there ever was one to begin with. For even Jacobs and Ukert wrote: “The bookbinder has not been mindful and has not sewn in the parchment leaves in their proper order; he has also damaged many a figure by cropping [the pages].”³¹ As a guideline for this reconstruction, I have used the two *Gladiatoria* manuscripts from Cracow and Vienna which principally follow the same internal logic. Thus a theoretical original composition can be determined quite exactly.

Table I on page 236 shows the current state of the manuscript and lists all numberings. The most important criterion is the number of the individual *Stück* (or fighting technique) in the beginning. A slash “/” marks those pages whose text has been cut off. The techniques for spear and dagger fighting and for holding down are numbered throughout in the text; only for the sword is this not the case. Consequently, it is only here that the order of the pages has become confused.

Additionally, we have leaf numberings from the old days, but we cannot tell for sure whether these were allocated in the time or even in the process of the making of the manuscript, or at some later date. The nature and the style of the numbers point at least to the period of origin of the manuscript. The dagger techniques feature an old numbering as well, and the spear fighting section has been numbered in more recent times. The final, likewise not entirely universal page numbering in pencil was presumably done in the 1960s.

The last column of the table shows the order of the pages from the time in Gotha. Here the sequence is partially interrupted since unfortunately it proved to be impossible to determine the exact state. Those leaves that are shifted in contrast to the current order are marked red for reasons of clarification.

The *Stücke* in sword fighting are unnumbered in the New Haven and the Vienna manuscript, thus differing from the Cracow version. Nevertheless, there is frequently a definite order when a certain technique is followed by its corresponding counter technique. These passages are marked with small letters. Since the sequence of the manuscript was disrupted in the process of rebinding it, a certain technique is now followed by the wrong counter on several occasions. In order to clarify the original composition, sequences that belong together are marked with small Roman numerals. The order follows the codex from Cracow, which features a stringent numbering of the sword-fighting techniques.

Table II on page 239 offers the complete reconstructed proper sequence which is displayed in the first column on the basis of the current extent of the manuscript. The second column takes into consideration all page losses that can be demonstrated particularly by the numbering in the techniques directly in the text; missing passages are marked with square brackets. The third column repeats the numbering of the techniques as they occur in the text like in the second table in order to facilitate an enhanced comparison with the manuscripts from Vienna and Cracow. These two are also introduced with their respective foliation and sequence of techniques. It becomes apparent that none of the three *Gladiatoria* manuscripts is entirely complete; but, in sum, we are able to reconstruct an archetype. Thus we obtain an overview of not only the probable original sequence of the New Haven codex but also of the initial extent of the work, which must have included at least eleven additional leaves. By means of these juxtapositions, it becomes evident that more than half of the manuscript was quite probably in the same order since the days of its

creation. The consecutive numbering of the fencing techniques provides the most striking support for this position. Further considerations, however, must remain provisional, as they cannot be resolved unambiguously.

When we create a composition based on the two *Gladiatoria* manuscripts from Cracow and Vienna—as has been done in columns two and three in the second table—the following inconsistencies appear:

Leaf 7 is tricky to integrate in every regard. On one hand, its condition has suffered more than any other leaf; if, on the other hand, we insert it into the textually correct position, it is located between the current leaves 10 and 11, which were marked consecutively as 12 and 13 long ago. Thus, it doesn't really fit there. Furthermore, leaf 7 carries the number 16. There is another leaf in this manuscript with that same leaf number 16, namely leaf 14. But this is located in correct proximity to leaves 13 and 15—which carry the numbers 15 and 17. In order to complicate matters even more, leaves 25 and 15, which belong together as stated in the reconstructed order, carry the leaf numbers 15 and 17 respectively, so a leaf 16 might very well fit between them. The handwriting of the numbering, however, shows a thoroughly distinct character.

When we turn our attention more closely to the old foliation from 11–16, we realise that the reconstructed tenth leaf (currently leaf 9) shows the folio number 11.

A consideration: when the foliation was being executed, which stylistically fits very well into the period of origin of the codex, leaf 7 (the dirty one) had already been inserted wrongly, namely before the *original* tenth leaf, so that it was counted as the eleventh one. Thus the sequence of the leaves of the manuscript may have been disrupted even at the time of its creation.

A daring hypothesis: what if the author of our *Fechtbuch* had noticed this erroneous composition completed by a bookbinder who was not familiar with the correct execution of the fencing techniques—albeit too late—and subsequently proceeded also to number the sword-fighting techniques in the text itself, as he had done with the remaining spear, dagger, and holding-down techniques in any case? In this way, he could prevent further discrepancies in future editions of the *Gladiatoria* corpus. And indeed, the sword-fighting techniques are in fact numbered in the text of the Cracow version that was created later.

Beyond that, the sequence of leaf numbering from 15 to 36, that

presumably was written by one scribe, remains a mystery, as it is interrupted by a larger block not only in the reconstructed version but also in the present one.

There also remains some uncertainty with regard to leaf 20. In contrast to the two *Gladiatoria* manuscripts from Cracow and Vienna, the order of both pages is reversed.

Nevertheless, writing in response to my inquiry, Francis Lapka said that he could not find any clue to prove that the leaf had been inserted the wrong way round: “The inner margin is still rather healthy in breadth, while the outer margin is closely trimmed (with minor loss of content, as with other leaves in the volume).” If the page was ever reversed, this must have happened a long time before the most recent rebinding.

Ultimately, we end up with several possibilities for assembling the manuscript by making use of the various available numberings; unfortunately, none of them turns out to be entirely coherent. Even the continuous page numbers don’t lead to satisfying and convincing results: if we kept together the old numbered leaves 21 and 22, we would pull apart the aforementioned connected sequence of the technique with the plate gauntlet (ff. 28v and 27r). In the end, the foliations and paginations that stem from different times can only serve as reference points. It is unlikely that we can ever know the initial structure of the manuscript with certainty.

Regarding the equally incomplete modern pagination in pencil, the odds are that the four leaves without that pagination (11, 18, 22 and 26) were the last ones that Paul Mellon purchased between 1962 and 1964, meaning that the pagination must have been done between February 1960 and December 1962. Another theory brought forward by Dr. Elisabeth Fairman, curator of the manuscript library of the YCBA, is that the three leaves with the cut-off texts were the last ones to be purchased—which unfortunately does not coincide very well with the actual leaf numbers. Since we regrettably cannot determine when Paul Mellon acquired each leaf, this question must also remain unsettled.

The long-lost fencing manuscript has resurfaced, yet it stubbornly refuses to give up its last secrets.

1 Difficult to decipher; may be a second 15.

2 In pencil, circled.

3 Gladiatoria Cracow doesn't contain the first dagger technique at all while in Vienna, the image exists, but the text is missing. This means that the numbering of the pieces in New Haven should be one greater throughout the codex when compared to the other two versions. However, starting with the third piece, the "regular" numbering is maintained and corresponds to the other two manuscripts.

4 This technique is explained on two pages.

5 In contrast to the two Gladiatoria manuscripts from Cracow and Vienna the order of these pages is reversed.

6 Without text.

7 The texts are identical, the images differ.

8 Followed by three empty leaves in the manuscript from Vienna.

9 Fols 49v–55v show a variety of unarmoured fencing disciplines, such as fighting with the staff, sword and buckler, or the large duelling shield.

GLOSSARY

GLOSSARY

Ansetzen (*Setting the point, lodging the point*): The action of successfully placing the point of your sword on the target, but not yet penetrating it or causing injury to your opponent. A common tactical situation with many counter techniques.

Arbait (*Work*): Any action that attempts to harm or incapacitate the opponent.

Ausserhalb (*Outside*): Refers to an attack or action that comes to the right side of the sword (looking from the defender's point of view) or towards the back side.

Bruch (*Break, a counter*): A counter of a given piece or technique.

Dringen an die Prust (*Pressing on the breast*): An action of setting the point (→*Ansetzen*) on the breast or under the armpit of your opponent and pushing him to leave the field of battle or injure him. A common tactical situation with many counter techniques.

Durch (*Through*): Describes the movement that starts on one side (e. g. inside), and ends on the other side (e. g. outside).

Halten (*Holding*): Techniques for immobilising or incapacitating your opponent while fighting on the ground. Also called →*Unterhalten*.

Innerhalb (*Inside*): Refers to an attack or action to the left of the sword (from the defender's point of view), between the body and the sword.

Kurtzes schwert (*Shortened sword*): One of the terms used to describe fighting in armour when the sword is grabbed with the left hand in the middle of the blade.

Mordslag (*Murder strike*): Striking with the pommel—the left hand grabs the middle of the blade, and the right hand the point, effectively turning the sword into a small pollaxe.

Ringen (*Wrestling*): Unarmed combat. In armour, this generally means throwing, unbalancing or using leverage to immobilize your opponent or bring him to the ground.

Scher (*Scissors*): A counter against the attempt to resolve the impasse of both opponents grabbing each other's swords by turning underneath the blades. Its name comes from the crossing of the two swords over the opponent's body, which resembles the action of scissors.

Strass der Glider (*Way of the joints*): A set of pieces which rely on very strong leverage against a wrist or an elbow.

Stuckh (*Piece*): A set of movements and actions of both opponents, which has a distinct beginning and generally ends with the incapacitation of the opponent or retreat.

Unterhalten (*Holding on the ground*): See →*Halten*.

Versetzen (*Parry*): A defensive action of stopping an attack with the blade by interception or displacement.

Wag (*Scales*): Balanced wrestling position with bent knees to keep the centre of gravity low.

Wiederbruch (*The counter's counter*): The counter to a counter of a given piece or technique.
